

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Introduction

The State of New Jersey adopted the Common Core Standards for Mathematics in June of 2010 and requires implementation in grades 3-5 beginning in September of 2012. The Wandell School mathematics curriculum for grades K-5 incorporates the State of New Jersey's model curriculum for mathematics.

Common Core Standards for Mathematics:

The K-5 standards provide students with a solid foundation in whole numbers, addition, subtraction, multiplication, division, fractions and decimals—which help young students build the foundation to successfully apply more demanding math concepts and procedures, and move into applications.

The standards stress not only procedural skill but also conceptual understanding, to make sure students are learning and absorbing the critical information they need to succeed at higher levels.

These standards define what students should understand and be able to do in their study of mathematics. What does mathematical understanding look like? One hallmark of mathematical understanding is the ability to justify, in a way appropriate to the student's mathematical maturity, why a particular mathematical statement is true or where a mathematical rule comes from. There is a world of difference between a student who can summon a mnemonic device to expand a product such as  $(a + b)(x + y)$  and a student who can explain where the mnemonic comes from. The student who can explain the rule understands the mathematics, and may have a better chance to succeed at a less familiar task such as expanding  $(a + b + c)(x + y)$ . Mathematical understanding and procedural skill are equally important, and both are assessable using mathematical tasks of sufficient richness.

All students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary in their post-school lives. The standards do provide clear signposts along the way to the goal of college and career readiness for all students.

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Unit Overview

**Content Area: Mathematics**

**Unit Title:** Number and Operations in Base Ten

**Target Course/Grade Level: Grade 5**

#### Unit Summary

Students develop understanding of why division procedures work based on the meaning of base-ten numerals and properties of operations. They finalize fluency with multi-digit addition, subtraction, multiplication, and division. They apply their understandings of models for decimals, decimal notation, and properties of operations to add and subtract decimals to hundredths. They develop fluency in these computations, and make reasonable estimates of their results. Students use the relationship between decimals and fractions, as well as the relationship between finite decimals and whole numbers (i.e., a finite decimal multiplied by an appropriate power of 10 is a whole number), to understand and explain why the procedures for multiplying and dividing finite decimals make sense. They compute products and quotients of decimals to hundredths efficiently and accurately.

(Source: <http://www.corestandards.org/Math/Content/4/introduction/>)

**Primary interdisciplinary connections: Science, Social Studies, Physical Education, Writing**

#### 21<sup>st</sup> century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

#### Unit Rationale

To understand place value is to understand the structure and sequence of our base-ten number system. As students count, interpret the values of written and spoken numbers, decide which number is larger or smaller, and explore relationships among numbers, they are developing a picture of our number system. (Kliman, 2000)

Because operations with numbers such as tens and hundreds make for simple calculations, place value plays a critical role throughout the grades in the development of computation strategies. (Kliman, 2000)

Kliman/TERC, Marlene. "How Do Students Build an Understanding of Place Value in Investigations?" Welcome to Investigations. TERC, Jan. 2000. Web. 20 June 2012. <[http://investigations.terc.edu/library/curric-math/qa-led/place\\_value.cfm](http://investigations.terc.edu/library/curric-math/qa-led/place_value.cfm)>.

### Learning Targets

#### Standards

- 5.NBT.A.1 Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and  $\frac{1}{10}$  of what it represents in the place to its left.
- 5.NBT.A.2 Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.
- 5.NBT.A.3a Read and write decimals to thousandths using base-ten numerals, number names, and

### Unit Learning Targets

*Students will ...*

- Describe the place value of numeral digits relative to both the place to the right and the place to the left (decimal to hundredths and whole numbers to billions).
- Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.
- Compare decimals to thousandths based on the value of the digits in each place using the symbols  $>$ ,  $=$ ,  $<$  when presented as base ten numerals, number names, or expanded form.
- Round a decimal to any place.
- Fluently multiply multi-digit whole numbers using the standard algorithm.
- Calculate whole number quotients with 4-digit dividends and 2-digit divisors and explain answers with equations, rectangular arrays, and area models.
- Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition, subtraction, multiplication, and division.
- Write numerical expressions when given a word problem or a scenario in words and use words to interpret numerical expressions.

### Evidence of Learning

#### Summative Assessment (at the end of each topic)

Each topic has a summative test and a performance task.

**Equipment needed:** see individual topics

**Teacher Resources:** *enVision Math Common Core: Realize Edition*. 2015

#### Formative Assessments

- teacher observation
- homework
- “Review What You Know”
- “Independent Practice”
- Topic performance task

### Topics

Topic	Timeframe
Topic 1 <i>Place Value</i>	14 days
Topic 2 <i>Adding and Subtracting Decimals</i>	14 days
Topic 3 <i>Multiplying Whole Numbers</i>	14 days
Topic 4 <i>Dividing by 1-Digit Divisors</i>	14 days
Topic 5 <i>Dividing by 2-Digit Divisors</i>	14 days
Topic 6 <i>Multiplying Decimals</i>	14 days
Topic 7 <i>Dividing Decimals</i>	14 days

#### Teacher Notes:

This unit consists of seven topics from the *enVision Math Common Core* series with anywhere from 6 to 8 lessons per topic. These seven topics address the Number and Operations in Base Ten domain of the Common Core Standards for Mathematics for Grade 5 students. In addition, these seven topics address all eight of the Standards for Mathematical Practice.

Essential questions were taken directly from the textbook series used by the district, *enVision Math Common Core: Realize Edition*.

Enduring understandings were taken from *Overarching Understandings and Essential Questions (New Jersey)* at <http://jaymetighe.com/resources/downloads/>

### Unit Overview

**Content Area: Mathematics**

**Unit Title:** Operations and Algebraic Thinking

**Target Course/Grade Level: Grade 5**

**Unit Summary**

Students will write and find the value of numerical expressions, and will look for number patterns in data and create a model of the data on a line graph.

**Primary interdisciplinary connections: Science, Social Studies, Physical Education, Writing**

**21<sup>st</sup> century themes:**

- Critical Thinking/Problem Solving
- Communication
- Collaboration

**Unit Rationale**

Recognizing, analyzing and constructing patterns helps to build a “strong foundation of algebra readiness”, and is central to both art and science. (McConnell, 2011)

A firm grounding in the big picture of how operations with numbers interrelate and how they are vital tools in life can help students build the positive attitudes that will help them become confident, efficient,

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

**ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS**

and effective problem-solvers (McConnell, 2011)

Algebraic thinking develops problem-solving skills. Students must analyze what they know and don't know about a problem, determine a method for finding solutions, and check results for accuracy. Algebra provides students with resources for dealing with real-world situations in a "systematic, analytic manner." (McConnell, 2011)

### Learning Targets

#### Standards

- 5.OA.A.1 Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.
- 5.OA.A.2 Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. *For example, express the calculation "add 8 and 7, then multiply by 2" as  $2 \times (8 + 7)$ . Recognize that  $3 \times (18932 + 921)$  is three times as large as  $18932 + 921$ , without having to calculate the indicated sum or product.*
- 5.OA.B.3 Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. *For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence. Explain informally why this is so.*

#### Content Statements

- Write and interpret numerical expressions.
- Analyze patterns and relationships.

#### CPI #

#### Cumulative Progress Indicator (CPI) from NJDOE Model Curriculum

5.OA.A.1	Evaluate numerical expressions with parentheses, brackets or braces.
5.OA.A.2	Write numerical expressions when given a word problem or a scenario in words and use words to interpret numerical expressions.
5.OA.B.3	Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. <i>For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence. Explain informally why this is so.</i>

#### Unit Essential Questions

- How are the values of an algebraic expression and a numerical expression found?

#### Unit Enduring Understandings

- The symbolic language of algebra is used to communicate and generalize the patterns in mathematics.
- Algebraic representation can be used to generalize patterns and relationships.
- Patterns and relationships can be represented graphically, numerically, symbolically, or verbally.
- Mathematical models can be used to describe and

<b>Unit Title: Number and Operations - Fractions</b>

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Target Course/Grade Level: Grade 5

#### Unit Summary

Students apply their understanding of fractions and fraction models to represent the addition and subtraction of fractions with unlike denominators as equivalent calculations with like denominators. They develop fluency in calculating sums and differences of fractions, and make reasonable estimates of them. Students also use the meaning of fractions, of multiplication and division, and the relationship between multiplication and division to understand and explain why the procedures for multiplying and dividing fractions make sense. (Note: this is limited to the case of dividing unit fractions by whole numbers and whole numbers by unit fractions.)

*Source: The introduction to the Common Core Standard for Mathematics. Retrieved from <http://www.corestandards.org/Math/Content/5/introduction/>*

**Primary interdisciplinary connections: Science, Social Studies, Physical Education, Writing**

#### 21<sup>st</sup> century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

#### Unit Rationale

Students apply their understanding of fractions and fraction models to represent the addition and subtraction of fractions with unlike denominators as equivalent calculations with like denominators. They develop fluency in calculating sums and differences of fractions, and make reasonable estimates of them. Students also use the meaning of fractions, of multiplication and division, and the relationship between multiplication and division to understand and explain why the procedures for multiplying and dividing fractions make sense. (Note: this is limited to the case of dividing unit fractions by whole numbers and whole numbers by unit fractions.)

Although students come to the topic of fractions with an understanding of what it means to share, fractions present difficulties for many students. Using their own experiences, students build conceptual knowledge of how numbers relate, how to divide a whole, how to manipulate fractions and how to “express and picture the same quantities in a variety of ways.” (McConnell, 2011)

A firm grounding in the big picture of how operations with numbers interrelate and how they are vital tools in life can help students build the positive attitudes that will help them become confident, efficient, and effective problem-solvers (McConnell, 2011)

### Learning Targets

#### Standards

- 5.NF.A.1 Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. *For example,  $2/3 + 5/4 = 8/12 + 15/12 = 23/12$ . (In general,  $a/b + c/d = (ad + bc)/bd$ .)*
- 5.NF.A.2 Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. *For example, recognize an incorrect result  $2/5 + 1/2 = 3/7$ , by observing that  $3/7 < 1/2$ .*
- 5.NF.B.3 Interpret a fraction as division of the numerator by the denominator ( $a/b = a \div b$ ). Solve

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. *For example, interpret  $3/4$  as the result of dividing 3 by 4, noting that  $3/4$  multiplied by 4 equals 3, and that when 3 wholes are shared equally among 4 people each person has a share of size  $3/4$ . If 9 people want to share a 50-pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie?*

- 5.NF.B.4a Interpret the product  $(a/b) \times q$  as  $a$  parts of a partition of  $q$  into  $b$  equal parts; equivalently, as the result of a sequence of operations  $a \times q \div b$ . *For example, use a visual fraction model to show  $(2/3) \times 4 = 8/3$ , and create a story context for this equation. Do the same with  $(2/3) \times (4/5) = 8/15$ . (In general,  $(a/b) \times (c/d) = ac/bd$ .)*
- 5.NF.B.4b Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.
- 5.NF.B.5a Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication.
- 5.NF.B.5b Explaining why multiplying a given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relating the principle of fraction equivalence  $a/b = (n \times a)/(n \times b)$  to the effect of multiplying  $a/b$  by 1.
- 5.NF.B.6 Solve real world problems involving multiplication of fractions and mixed numbers, e.g., by using visual fraction models or equations to represent the problem.
- 5.NF.B.7a Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. *For example, create a story context for  $(1/3) \div 4$ , and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that  $(1/3) \div 4 = 1/12$  because  $(1/12) \times 4 = 1/3$ .*
- 5.NF.B.7b Interpret division of a whole number by a unit fraction, and compute such quotients. *For example, create a story context for  $4 \div (1/5)$ , and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that  $4 \div (1/5) = 20$  because  $20 \times (1/5) = 4$ .*
- 5.NF.B.7c Solve real world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions, e.g., by using visual fraction models and equations to represent the problem. *For example, how much chocolate will each person get if 3 people share  $1/2$  lb of chocolate equally? How many  $1/3$ -cup servings are in 2 cups of raisins?*

### Content Statements

- Use equivalent fractions as a strategy to add and subtract fractions.
- Apply and extend previous understandings of multiplication and division.
- Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.
- Interpret multiplication as scaling (resizing).
- Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions.

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

**ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS**

### Teacher Notes:

This unit consists of three topics from the *enVision Math* Common Core series with anywhere from 6 to 12 lessons per topic. These three topics address the Number and Operation - Fractions domain of the Common Core Standards for Mathematics for Grade 5 students. In addition, these three topics address all eight of the Standards for Mathematical Practice.

Essential questions were taken directly from the textbook series used by the district, *enVision Math Common Core: Realize Edition*.

Enduring understandings were taken from *Overarching Understandings and Essential Questions (New Jersey)* at <http://jaymctighe.com/resources/downloads/>

Unit Overview
<b>Content Area: Mathematics</b>
<b>Unit Title:</b> Measurement and Data
<b>Target Course/Grade Level: Grade 5</b>
<b>Unit Summary</b> <p>Students recognize volume as an attribute of three-dimensional space. They understand that volume can be measured by finding the total number of same-size units of volume required to fill the space without gaps or overlaps. They understand that a 1-unit by 1-unit by 1-unit cube is the standard unit for measuring volume. They select appropriate units, strategies, and tools for solving problems that involve estimating and measuring volume. They decompose three-dimensional shapes and find volumes of right rectangular prisms by viewing them as decomposed into layers of arrays of cubes. They measure necessary attributes of shapes in order to determine volumes to solve real world and mathematical problems. (<i>Source: The introduction to the Common Core Standard for Mathematics. Retrieved from <a href="http://www.corestandards.org/Math/Content/5/introduction/">http://www.corestandards.org/Math/Content/5/introduction/</a></i>)</p> <p>Students use line plots to record generated data in fractional terms use the line plots to answer questions about the data.</p>
<b>Primary interdisciplinary connections: Science, Social Studies, Physical Education, Writing</b>
<b>21<sup>st</sup> century themes:</b> <ul style="list-style-type: none"><li>• Critical Thinking/Problem Solving</li><li>• Communication</li><li>• Collaboration</li></ul>
<b>Unit Rationale</b> <p>Manipulating and displaying data requires students to apply their knowledge of “reasoning, modeling, working with patterns, precise calculating, problem solving, and communicating.” Data and the resulting statistics help to explain and predict real-world events. (McConnell, 2011)</p> <p>An accurate and consistent system of measurement is a foundation of our economy and necessary for</p>

interaction with others around the globe. Systems of measurement facilitate communication in all aspects of life. (McConnell, 2011)

Students recognize volume as an attribute of three-dimensional space. They understand that volume can be measured by finding the total number of same-size units of volume required to fill the space without gaps or overlaps. They understand that a 1-unit by 1-unit by 1-unit cube is the standard unit for measuring volume. They select appropriate units, strategies, and tools for solving problems that involve estimating and measuring volume. They decompose three-dimensional shapes and find volumes of right rectangular prisms by viewing them as decomposed into layers of arrays of cubes. They measure necessary attributes of shapes in order to determine volumes to solve real world and mathematical problems. (Common Core Standards)

### Learning Targets

#### Standards

- 5.MD.A.1 Convert among different-sized standard measurement units within a given measurement system (e.g., convert 5 cm to 0.05 m), and use these conversions in solving multi-step, real world problems.
- 5.MD.B.2 Make a line plot to display a data set of measurements in fractions of a unit ( $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{8}$ ). Use operations on fractions for this grade to solve problems involving information presented in line plots. *For example, given different measurements of liquid in identical beakers, find the amount of liquid each beaker would contain if the total amount in all the beakers were redistributed equally.*
- 5.MD.C.3a A cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure volume.
- 5.MD.C.3b A solid figure which can be packed without gaps or overlaps using  $n$  unit cubes is said to have a volume of  $n$  cubic units.
- 5.MD.C.4 Measure volumes by counting unit cubes, using cubic cm, cubic in, cubic ft, and improvised units.
- 5.MD.C.5a Find the volume of a right rectangular prism with whole-number side lengths by packing it with unit cubes, and show that the volume is the same as would be found by multiplying the edge lengths, equivalently by multiplying the height by the area of the base. Represent threefold whole-number products as volumes, e.g., to represent the associative property of multiplication.
- 5.MD.C.5b Apply the formulas  $V = l \times w \times h$  and  $V = b \times h$  for rectangular prisms to find volumes of right rectangular prisms with whole-number edge lengths in the context of solving real world and mathematical problems.
- 5.MD.C.5c Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real world problems.
- 5.G.A.2 Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.

#### Content Statements

- Convert like measurement units within a given measurement system.
- Represent and interpret data.
- Graph points on the coordinate plane to solve real-world and mathematical problems.
- Geometric measurement: understand concepts of volume.
  - Recognize volume as an attribute of solid figures and understand concepts of volume

Unit Overview
<b>Content Area: Mathematics</b>
<b>Unit Title:</b> Geometry
<b>Target Course/Grade Level: Grade 5</b>
<p><b>Unit Summary</b></p> <p>In this unit students will learn to locate points on a coordinate plane and use their knowledge about coordinates to solve problems. Students will also study some two-dimensional figures and sort them into</p>

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

different categories according to their side lengths, angles, and other properties.

**Primary interdisciplinary connections: Science, Social Studies, Physical Education, Writing**

**21<sup>st</sup> century themes:**

- Critical Thinking/Problem Solving
- Communication
- Collaboration

### Unit Rationale

Geometric shapes are essential to many facets of our lives, from art to architecture. Learning the mathematical principles that are the basis for “creating, describing, classifying, and manipulating shapes can open up new world for students.” (McConnell, 2011, pg 82).

### Learning Targets

#### Standards

- 5.G.A.1 Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines (the origin) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of one axis, and the second number indicates how far to travel in the direction of the second axis, with the convention that the names of the two axes and the coordinates correspond (e.g.,  $x$ -axis and  $x$ -coordinate,  $y$ -axis and  $y$ -coordinate).
- 5.G.A.2 Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.
- 5.G.B.3 Understand that attributes belonging to a category of two-dimensional figures also belong to all subcategories of that category. *For example, all rectangles have four right angles and squares are rectangles, so all squares have four right angles.*
- 5.G.B.4 Classify two-dimensional figures in a hierarchy based on properties.
- 5.OA.B.3 Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. *For example, given the rule "Add 3" and the starting number 0, and given the rule "Add 6" and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence. Explain informally why this is so.*

#### Content Statements

- Graph points on the coordinate plane to solve real-world and mathematical problems.
- Classify two-dimensional figures into categories based on their properties.
- Analyze patterns and relationships.

CPI #	Cumulative Progress Indicator (CPI) from NJDOE Model Curriculum
5.G.A.1	Use a pair of perpendicular number lines ( <b>axes</b> ) to define a coordinate system, with the intersection of the lines ( <b>origin</b> ) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers ( <b>coordinates</b> ).
5.G.A.2	Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.
5.G.B.3	Identify attributes of a two-dimensional shape based on attributes of the groups and categories in which the shape belongs.

## Wandell School Math Curricula

Aligned to the 2014 Common Core Standards for Mathematics

**ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS**

5.G.B.4	Classify two- dimensional figures in a hierarchy based on properties.
5.OA.B.3	Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. <i>For example, given the rule “Add 3” and the starting number 0, and given the rule “Add 6” and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence.</i> Explain informally why this is so.

<p><b>Unit Essential Questions</b></p> <p><b>Topic 15</b></p> <ul style="list-style-type: none"> <li>• How can angles be measured and classified?</li> <li>• How can polygons, triangles, and quadrilaterals be described, classified, and named?</li> </ul> <p><b>Topic 16</b></p> <ul style="list-style-type: none"> <li>• How are points graphed?</li> <li>• How can we show the relationship between sequences on a graph?</li> </ul>	<p><b>Unit Enduring Understandings</b></p> <ul style="list-style-type: none"> <li>• Geometric properties can be used to construct geometric figures.</li> <li>• Geometric relationships provide a means to make sense of a variety of phenomena.</li> <li>• Coordinate geometry can be used to represent and verify geometric/algebraic relationships.</li> </ul>
---	---

<p><b>Unit Learning Targets</b></p> <p><i>Students will ...</i></p> <ul style="list-style-type: none"> <li>• Use a pair of perpendicular number lines (<b>axes</b>) to define a coordinate system, with the intersection of the lines (<b>origin</b>) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers (<b>coordinates</b>).</li> <li>• Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.</li> <li>• Identify attributes of a two-dimensional shape based on attributes of the groups and categories in which the shape belongs.</li> <li>• Classify two- dimensional figures in a hierarchy based on properties.</li> <li>• Generate two numerical patterns using two given rules. ### LESSON REFLECTION

Reflect on the lesson you have developed and rate the degree to which the lesson *Strongly*, *Moderately* or *Weakly* meets the criteria below.

Lesson Activities:	Strongly	Moderately	Weakly
Are challenging and require higher order thinking and problem solving skills			
Allow for student choice			
Provide scaffolding for acquiring targeted knowledge/skills			
Integrate global perspectives			
Integrate 21 <sup>st</sup> century skills			
Provide opportunities for interdisciplinary connection and transfer of knowledge and skills			
Foster student use of technology as a tool to develop critical thinking, creativity and innovation skills			
Are varied to address different student learning styles and preferences			
Are differentiated based on student needs			
Are student-centered with teacher acting as a facilitator and co-learner during the teaching and learning process			
Provide means for students to demonstrate knowledge and skills and progress in meeting learning goals and objectives			
Provide opportunities for student reflection and self-assessment			
Provide data to inform and adjust instruction to better meet the varying needs of learners
