Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Introduction

The K-5 standards provide students with a solid foundation in whole numbers, addition, subtraction, multiplication, division, fractions and decimals—which help young students build the foundation to successfully apply more demanding math concepts and procedures, and move into applications.

The standards stress not only procedural skill but also conceptual understanding, to make sure students are learning and absorbing the critical information they need to succeed at higher levels.

These standards define what students should understand and be able to do in their study of mathematics. What does mathematical understanding look like? One hallmark of mathematical understanding is the ability to justify, in a way appropriate to the student's mathematical maturity, why a particular mathematical statement is true or where a mathematical rule comes from. There is a world of difference between a student who can summon a mnemonic device to expand a product such as (a + b)(x + y) and a student who can explain where the mnemonic comes from. The student who can explain the rule understands the mathematics, and may have a better chance to succeed at a less familiar task such as expanding (a + b + c)(x + y). Mathematical understanding and procedural skill are equally important, and both are assessable using mathematical tasks of sufficient richness.

All students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary in their post-school lives. The standards do provide clear signposts along the way to the goal of college and career readiness for all students.

National Governors Association Center for Best Practices, Council of Chief State School Officers. "Common Core State Standards - Mathematics." National Governors Association Center for Best Practices, Council of Chief State School Officers, Washington D.C., 2010. Web. 20 June 2012. http://www.corestandards.org/the-standards/mathematics.

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Gifted & Talented

The Saddle River School District extends learning opportunities to all high achieving students. It supports the philosophy that every student has special talents and gifts. The Saddle River School District's enrichment and gifted & talented programs offer a unique approach to servicing all students while maintaining a focus on those who are identified as needing pull out services through the district's screening/criteria process. The Saddle River School District's enrichment program focuses on bringing out the special talents in all learners as enrichment instruction is delivered to all students in grades kindergarten through fifth grade. The program follows the Joseph Renzulli schoolwide enrichment model that concentrates on "schools being a place for talent development," (Renzulli, 1994). The program follows a wide-range of enriching/developing activities based upon student strengths and interests. Additionally, the program focuses on enriching activities across the curriculum in providing complementary and developing features/standards for all subject areas. The enrichment program builds upon existing student learning standards in all content areas in coordination with instruction and student needs.

The Saddle River School District Gifted & Talented program offers pull-out instruction for those students meeting the multiple measures and specific criteria set forth and approved by the board of education. The identification process may/can begin as early as kindergarten. The gifted and talented program follows the central theme that all appropriate curriculum standards are followed and that those standards are the foundation for developing student learning opportunities and standards across the curriculum. The gifted and talented program will provide the following in coordination with each content area when and where appropriate:

- Develop students' abilities and engage critical thinking skills
- Expand students' creative thought process and responses
- Advance students' research skills needed to become independent learners
- Develop students' abilities to self-evaluate their own learning process
- Enrich students' abilities in seeking and expanding their own knowledge in subject content areas and individual talents
- Develop students' ability to interact effectively in small-group and large-group setting
- Heighten students' ability in expanding on student learning standards to strengthen appropriate skills necessary for 21st century learning

English Language Learners (ELL)

The Saddle River School District recognizes the importance of increasing language proficiency while gaining confidence and strength so that academic goals and New Jersey state learning standards can be met. English Language Learners in the Saddle River School District are identified through a multitude of measures. These measure include, but are not limited to: a home language survey, parental conferencing, and daily teacher observations. Based on the information/data collected, the Saddle River School District will determine if a formal approved language assessment is necessary. The World-Class Instructional Design and Assessment (WIDA) is the assessment tool for those students recommended for ELL testing.

The Saddle River School District will provide the following accommodations for ELL students:

- Basic skills with a focus a the specific language skills
- Use of a translation dictionary (ipad, google translator, bilingual word to word dictionary)
- Preferential seating
- Extended time and/or modified classroom assignments
- Print out of teacher notes/lessons for additional review

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

- Extended time and/or modified assessments
- Extended time/accommodation for standardized testing in coordination with state regulations

Special Education Students

The Saddle River School District special education department offers a full continuum of services for students who are eligible for special education services. In order to meet the specific requirements for each learner, programs are developed so that that social, emotional and educational needs are met within the least restrictive environment. The specific program for each learner is based on individual needs where goals and objectives are set and followed accordingly. These individual educational plans follow a specific plan that is aligned to the student learning standards and may include, but is/are not limited to:

- Individual education plan
- Pull-out support
- Replacement content instruction
- In-class support
- Instructional aide(s)
- Support services (i.e.; speech, physical therapy, occupational therapy)
- Presentation accommodations (i.e.; notes, outlines, instructions, lists, organization)
- Response accommodations (i.e.; dictations, audio, dictionaries, calculation devices, scribes)
- Setting accommodations (i.e.; lighting, acoustics, seat placement, testing, sensory tools)
- Timing accommodations (i.e.; completing tasks, frequent breaks, processing directions)
- Scheduling accommodations (i.e.; spacing out projects/assignments, order of schedule)
- Organizational accommodations (i.e.; highlighter, time management, planning)
- Assignment modifications (i.e.; fewer tasks, alternate questions)
- Technology support (i.e; ipad, word processing, specific programs/apps)
- Testing accommodations (i.e.; extended time, placement, seating, time)

Students who require additional services outside of the district's resource program, may require an out-of-district placement. In this event, the Child Study Team will coordinate accordingly to ensure that all necessary learning standards are being met.

Students in Danger of Failing

For those students in danger of failing, the Saddle River School District has a specific referral process to ensure that student needs are being met. The Intervention & Referral Services (I&RS) is an interdisciplinary team of professional within the school that addresses a full range of student/staff needs and concerns. This process is designed to maximize student success and establish goals and benchmarks to promote outcomes that positively reflect academics, health, behavior, self-esteem, work habits and strong character. The I&RS team is comprised of a chairperson, child study team member, teachers and other school professionals so that a continuous system of support can be provided. The team provides a plan so that short and long term goals can be established and strategies can be implemented and designed specifically for each student. In trying to achieve success, the team works collaboratively in making growth for each student a top priority and adhere to a plan that is achievable but rigorous. This plan, as set by New Jersey I&RS Team Process, may contain, but is not limited to the following;

- Request for assistance
- Information collection
- Parent Notification
- Problem solving within the I&RS team
- Developing an I&RS action plan
- Supporting, evaluating and continuing the process

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

In evaluating and monitoring students, the I&RS team closely calculates a plan so that curriculum needs can be met. In order to achieve and demonstrate success, the Saddle River School District provides modifications and support so that consideration is given to, but not limited to, the following:

- Student strengths/weaknesses
- Classroom and standardized assessments
- Academic records
- Social and behavioral patterns
- Previous history or concern
- Participation in class (and interaction with peers)
- Health related concerns
- Family concerns
- Retention of information/instruction
- Student interests
- Independent & group work habits
- Emotional status
- Study habits (at home/school)
- Present level of functioning
- Expectations (academic, social, behavioral, etc.)
- Following classroom rules/directions/procedures

As the I&RS team formulates a plan, many ongoing concerns are addressed within the team and may include parental notification/input. The problem solving objectives as set forth by New Jersey I&RS Team Process will:

- Describe the problem
- Identify the priority
- Develop objectives
- Review previous interventions
- Create new strategies
- Analyze and evaluate solutions

The Saddle River School District continues to inform and update staff of the I&RS procedures. The procedures are as follows:

- Teacher recognizes a problem(s) with a particular student in class and refers the student to the I&RS committee by filling out the appropriate paperwork. An I&RS meeting is scheduled to and the committee and appropriate staff members gather to discuss and begin the proactive process of assistance.
- Information from the teacher(s), administrator(s), and other school personnel is collected.
- Parent notification where/when appropriate
- The I&RS team begins the problem solving process by offering ideas and suggestions pertaining to the problems while prioritizing the most important issues.
- The I&RS team develops an action plan with specific strategies that can be implemented to achieve both short term and long term goals.
- The I&RS team meets regularly to evaluate and support the action plan (and to adjust accordingly when/where appropriate). Parents are notified on an ongoing basis to continue communication in the support of implementing the strategies set forth in the action plan.

Basic Skills Instruction is also a valuable resource that the Saddle River School District uses to meet the needs of struggling students. Students who require additional academic support will be offered that assistance in all subject areas. This system allows the students to receive in-class or pull-out support when

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

and where appropriate so that grade level curriculum and student learning goals can be met. This program is an intervention system used to create a positive and constructive learning environment so that students can achieve success.

After the I&RS action plan has been in place the team may continue with the current strategies, offer/discuss new strategies or decide that the student should be referred to the district's child study team. In the instance of referring a student to the child study team, it can be concluded that many of the strategies from the action plan were not benefitting the student as intended. The child study team them would follow the guidelines for the referral process and notify the parents/guardians of the potential special education recommendation.

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Unit 1 Overview

Content Area: Mathematics

Unit Title: Operations and Algebraic Thinking

Target Course/Grade Level: Grade 2

Unit Summary

In this unit students develop addition and subtraction strategies based on their developing sense of how numbers can be composed and decomposed and on the inverse relationship between addition and subtraction. Students learn to create arrays of up to 5 rows and 5 columns, then add these equal groups to find the total, setting the foundation for multiplication and area in grade 3.

Primary interdisciplinary connections: Reading, Language Arts, Science, Social Studies

21st century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

Unit Rationale

A firm grounding in the big picture of how operations with numbers interrelate and how they are vital tools in life can help students build the positive attitudes that will help them become confident, efficient, and effective problem-solvers (McConnell, 2011)

Algebraic thinking develops problem-solving skills. Students must analyze what they know and don't know about a problem, determine a method for finding solutions, and check results for accuracy. Algebra provides students with resources for dealing with real-world situations in a "systematic, analytic manner." (McConnell, 2011)

Recognizing, analyzing and constructing patterns helps to build a "strong foundation of algebra readiness", and is central to both art and science. (McConnell, 2011)

Learning Targets

Standards

- <u>2.OA.A.1</u> Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.
- <u>2.OA.B.2</u> Fluently add and subtract within 20 using mental strategies. By the end of Grade 2, know from memory all sums of two one-digit numbers.
- <u>2.OA.C.4</u> Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal addends.
- <u>2.NBT.B.5</u> Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.
- <u>2.NBT.B.6</u>Add up to four two-digit numbers using strategies based on place value and properties of operations.
- <u>2.NBT.B.9</u> Explain why addition and subtraction strategies work, using place value and the properties of operations.

Content Statements

• Represent and solve problems involving addition and subtraction.

• Add and su	btract within 20.							
• Work with equal groups of objects to gain foundations for multiplication.								
• Use place value understanding and properties of operations to add and subtract.								
Indicator								
2.0A.A.1	Add and subtract within 100 to solve 1 position.	Add and subtract within 100 to solve 1- and 2-step word problems with unknowns in any position.						
2.OA.B.2	 Add and subtract fluently within 2 composing numbers using 10 as th By the end of grade 2, know from 	20 using mental strategies such as decomposing and ne benchmark number. memory all sums of two 1-digit numbers.						
2.OA.C.4	Write an addition equation with repeat and 5 columns) and solve to find the to	ted equal addends from a rectangular array (up to 5 rows otal number.						
2.NBT.B.5	Use a variety of strategies (place value addition and subtraction) to add and su	e, properties of operations, and/or the relationship between abtract within 100.						
2.NBT.B.6	Add up to four 2-digit numbers based	on place value and properties of operations.						
2.NBT.B.9	Apply addition and subtraction strateg and explain why they work using draw	ies based on place value and the properties of operations vings or objects.						
Unit Essential	Questions	Unit Enduring Understandings Topic						
• Topic 1: What	at are some ways to think about	1:						
addition and	subtraction?	• <i>Parts of a whole</i> is one interpretation of addition.						
• Topic 2: What facts?	at are strategies for finding addition	Addition number sentences can be used to show parts of a whole.						
• Topic 3: What subtraction fat	tt are strategies for finding acts?	• Joining parts to make a whole is one interpretation of addition. Addition number sentences can be used						
• Topic 4: What	t is the relationship between arrays	to show <i>joining parts of a whole</i> .						
and repeated	addition?	• Separating parts from a whole and comparison are						
		two interpretations of subtraction. Subtraction						
		<i>parts from a whole</i> or <i>comparison</i> subtraction situations.						
		• Addition and subtraction have an inverse						
		relationship. The inverse relationship between						
		addition and subtraction can be used to find						
		related addition fact.						
		• Some problems can be solved by using objects to act out the actions in the problem.						
		Topic 2:						
		• The number relationships of <i>0-more-than</i> , <i>1-</i>						
		<i>more-than</i> , and <i>2-more-than</i> are the basis for addition facts with 0, 1, and 2.						
		• Doubles facts can be associated with memorable real-world situations.						
		• Basic addition facts that are near doubles can be						

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

found using a related doubles fact.

 Addition facts involving 9 can be changed to an equivalent fact with 10. Addition facts involving 8 can be changed to an equivalent fact with 10. Two numbers can be added in any order. Three or more numbers can be grouped and added in any order. Information in a problem can often be shown using a picture or diagram and used to understand and solve the problem. Some problems can be solved by writing and completing a number sentence or equation.
Topic 3:
• The number relationships of <i>0-less-than</i> , <i>1-less-than</i> , and <i>2-less-than</i> are the basis for subtraction facts with 0, 1, and 2.
• Addition and subtraction have an inverse relationship. The inverse relationship between addition and subtraction can be used to find subtraction facts; every subtraction fact has a related addition fact.
• Some subtraction facts can be found by subtracting from minuend (the larger number) an amount to get to 10 and then subtracting the amount that remains.
• Sometimes the answer to one problem or question is needed to find the answer to another problem or question.
Topic 4:
 Repeated addition involves joining equal groups. An array involves joining equal groups and is one way to think about repeated addition. Information in a problem can often be shown using a diagram and used to solve the problem. Some problems can be solved by writing and completing a number sentence or equation.

Unit Learning Targets

Students will ...

- add and subtract within 100 to solve 1- and 2-step word problems with unknowns in any position.
- add up to four 2-digit numbers using place value and properties of operations.
- understand that numbers can be added in any order.
- understand that numbers can be grouped in any order, then added.
- add and subtract fluently within 20 mentally using 10 as a benchmark.
- use a variety of strategies to add and subtract within 100.
- write an addition equation with repeated equal addends from a rectangular array of up to 5 rows and 5 columns, then solve to find the total number.

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

- apply addition and subtraction strategies based on place value and properties of operations, then explain why they work using drawings or objects.
- know from memory all sums of two 1-digit numbers by the end of Grade 2.

Evidence of Learning

Summative Assessment (14 days per topic)

Each topic has a summative test and performance assessment.

Materials needed: listed in each topic as per teacher's guide for that topic.

Teacher Notes:

This unit consists of four topics from the *enVision Math* series with anywhere from 4 to 7 lessons per topic. These four topics address the Operations and Algebraic Thinking domain of the Common Core Standards for Mathematics for Grade 2 students. In addition, these four topics address all eight of the Standards for Mathematical Practice.

Essential questions and enduring understandings were taken directly from the textbook series used by the district, *enVision Math Common Core: Realize Edition*

Unit 2 Overview

Content Area: Mathematics

Unit Title: Number and Operations in Base Ten

Target Course/Grade Level: Grade 2

Unit Summary

This unit involves students in making sense of our number system by continuing their experiences with counting numbers. Counting experiences provide children with an exposure to place value which is the basis of the structure of our number system. Students use connecting cubes to model numbers; the cubes give students opportunities to observe the combinations of tens and ones needed to create a given number and to compose and decompose tens when adding two numbers. Children use a hundreds chart to observe patterns in the number system. These experiences strengthen students' number sense and form the foundation for success in problem solving. Students are taught to use place value to develop mental addition and subtraction strategies. The focus is on understanding the structure of numbers to add and subtract, rather than arbitrary rules. By the end of the unit, students are adding and subtracting within 1,000 using strategies based on place-value understanding, properties of operations, and the relationship of addition and subtraction as inverse operations. Throughout the unit, students apply their number sense to solve one- and two-step word problems.

Primary interdisciplinary connections: Reading, Language Arts, Science, Social Studies

21st century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

Unit Rationale

A firm grounding in the big picture of how operations with numbers interrelate and how they are vital tools in life can help students build the positive attitudes that will help them become confident, efficient, and effective problem-solvers (McConnell, 2011)

Algebraic thinking develops problem-solving skills. Students must analyze what they know and don't know about a problem, determine a method for finding solutions, and check results for accuracy. Algebra provides students with resources for dealing with real-world situations in a "systematic, analytic manner." (McConnell, 2011)

Recognizing, analyzing and constructing patterns helps to build a "strong foundation of algebra readiness", and is central to both art and science. (McConnell, 2011)

Learning Targets

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Standards

- <u>2.NBT.A.1a</u> 100 can be thought of as a bundle of ten tens called a "hundred."
- <u>2.NBT.A.1b</u> The numbers 100, 200, 300, 400, 500, 600, 700, 800, 900 refer to one, two, three, four, five, six, seven, eight, or nine hundreds (and 0 tens and 0 ones).
- <u>2.NBT.A.2</u> Count within 1000; skip-count by 5s, 10s, and 100s
- <u>2.NBT.A.3</u> Read and write numbers to 1000 using base-ten numerals, number names, and expanded form.
- <u>2.NBT.A.4</u> Compare two three-digit numbers based on meanings of the hundreds, tens, and ones digits, using >, =, and < symbols to record the results of comparisons.
- <u>2.NBT.B.5</u> Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.
- <u>2.NBT.B.6</u> Add up to four two-digit numbers using strategies based on place value and properties of operations.
- <u>2.NBT.B.8</u> Mentally add 10 or 100 to a given number 100-900, and mentally subtract 10 or 100 from a given number 100-900
- <u>2.NBT.B.7</u> Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method. Understand that in adding or subtracting three-digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones; and sometimes it is necessary to compose or decompose tens or hundreds.
- <u>2.NBT.B.9</u> Explain why addition and subtraction strategies work, using place value and the properties of operations.
- <u>2.OA.A.1</u> Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.
- <u>2.OA.C.3</u> Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s; write an equation to express an even number as a sum of two equal addends.
- <u>2.MD.B.6</u> Represent whole numbers as lengths from 0 on a number line diagram with equally spaced points corresponding to the numbers 0, 1, 2, ..., and represent whole-number sums and differences within 100 on a number line diagram.

Content Statements

- Understand place value.
- Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones; e.g., 706 equals 7 hundreds, 0 tens, and 6 ones.
- Use place value understanding and properties of operations to add and subtract.
- Represent and solve problems involving addition and subtraction.
- Work with equal groups of objects to gain foundations for multiplication.
- Relate addition and subtraction to length.

CPI #	Cumulative Progress Indicator (CPI) from NJDOE Model Curriculum	
2.NBT.A.1a	• Represent a 3-digit number as specific amounts of 100s, 10s, and 1s.	
	• Identify 10 tens as 100	

2.NBT.A.1b	Represent the century numbers as a 2, 3, 4,9 followed by two zeros to indicate no tens and no ones.		
2.NBT.A.2	Skip count by 5s, 10s, and 100s to 1000 beginning at any multiple of 1, 5, 10, or 100.		
2.NBT.A.3	 Read numbers to 1,000 using base-ten numerals, number names and expanded form. Write numbers to 1,000 using base-ten numerals, number names and expanded form. 		
2.NBT.A.4	Use <, >, and = to record the results of comparing two 3-digit number by decomposing the 3-digit number into 100s, 10s, and 1s.		
2.NBT.B.5	Use a variety of strategies (place value, properties of operations, and/or the relationship between addition and subtraction) to fluently add and subtract within 100.		
2.NBT.B.6	Add up to four 2-digit numbers based on place value and properties of operations.		
2.NBT.B.7	Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method. Understand that in adding or subtracting three-digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones; and sometimes it is necessary to compose or decompose tens or hundreds.		
2.NBT.B.8	Apply properties of place value to mentally add or subtract 10 or 100 to/from a given number within 100-900.		
2.NBT.B.9	Apply addition and subtraction strategies based on place value and the properties of operations and explain why they work using drawings or objects.		
2.0A.A.1	Add and subtract within 100 to solve 1- and 2-step word problems with unknowns in any position.		
2.OA.C.3	 Recognize that in groups of even numbers, objects can be counted by 2s, and that in groups of odd numbers, objects will not pair up evenly (one will be left over). Write an equation to illustrate that all even numbers can be formed from the addition of two equal addends., 		
2.MD.B.6	Use a number line of equally spaced points to represent whole number sums and differences (within 100) related to length		
 Unit Essential Topic 5: How compared? Topic 6: How Topic 7: How mentally? Topic 8: What two-digit nur Topic 9: What subtracting two tropic 10: What reading and we topic 11: What was a subtracting the topic 11: What was a subt	Questions v can numbers to 100 be shown and v can sums be found mentally? v can differences be found at is a standard procedure for adding nbers? at is a standard procedure for vo-digit numbers? hat number patterns are helpful I vriting numbers to 1,000? hat are the ways to add and subtract	 Unit Enduring Understandings Topic 5: In a two-digit number, the tens digit tells how many groups of ten and the ones digit tells the number of ones. The numbers 21-99 are written by joining two number words that describe the number of tens and the number of ones. Numbers through 20 are each represented by a unique number word. Our place value number system makes it easy to name the number that is 10 more or 10 less than any other given number by simply adjusting the digit in the tens place. 	
three-digit numbers?		• Numbers can be used to tell how many.	

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

• Place value can be used to compare and order

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

- The position words *before* and *after* can be used to explain number relationships.
- Some numbers can be divided into equal parts (even numbers) and some cannot (odd numbers).
- In order to solve some problems, data need to be selected from a source outside the statement of the problem, like a chart.

Topic 6:

- Adding tens is like adding ones.
- When adding a number less than ten to a twodigit number using the traditional algorithm, it may be necessary to rename 10 ones as 1 ten.
- Two-digit numbers can be broken apart using tens and ones and added in different ways.
- Patterns on a hundred chart can be used to add numbers and to develop mental math strategies and number sense.
- Adding groups of tens is similar to adding numbers less than ten.
- Some problems can be solved by identifying elements that repeat in a predictable way.

Topic 7:

- Subtracting tens is like subtracting ones.
- To find parts of 100, add on ones to make a ten and count on by tens to reach 100.
- Patterns in a hundred chart can be used to subtract numbers and to develop mental math strategies and number sense.
- Subtracting groups of tens is similar to subtracting numbers less than ten.
- Some problems have data missing needed to find the answer, and some problems have extra data not needed to solve the problem.

Topic 8:

- 10 ones can be regrouped for 1 ten.
- The standard addition algorithm for two-digit and one-digit numbers breaks the calculation into simpler calculations using place value, starting with the ones and then the tens. Answers to the simpler calculations are used to give the final sum.
- The standard algorithm for adding two-digit and two-digit numbers is just an extension of the

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

algorithm for adding two-digit and one-digit

 numbers. The ones are added first, and then the tens. All sums and differences can be found using models (cubes). Some calculations are done easily using mental math or paper and pencil. More complex calculations can be done using a calculator. Sums can be represented as lengths on a number line diagram of addition. Three and four two-digit numbers can be grouped and added in any order. Information in a problem can often be shown using a diagram to solve the problem. Some problems can be solved by writing and completing a number sentence or equation.
Topic 9:
 1 ten can be regrouped for 10 ones. The standard subtraction algorithm breaks the calculation into simpler calculations starting with the ones and then the tens.
• The standard algorithm for subtracting two-digit and two-digit numbers is just an extension of the algorithm for subtracting two-digit and one-digit numbers.
• All sums and differences can be found using models (cubes). Some calculations are done easily using mental math or paper and pencil. More complex calculations can be done using a calculator.
• Differences can be represented as lengths in a number line diagram of subtraction.
• The inverse relationship between addition and subtraction can be used to check subtraction.
• Sometimes the answer to one problem/question is needed to find the answer to another problem/question.
Topic 10:
• Numbers can be used to tell how many.
• Our number system is based on groups of ten. Whenever we get 10 in one place value, we
move to the next greater place value.
 Adding or subtracting hundreds or tens is similar to adding or subtracting single-digit numbers.
• Counting and place-value patterns can be seen on a hundreds chart.
Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

• Number lines can help with skip counting.
• Place value can be used to compare and order numbers.
• Some problems can be solved by identifying elements that repeat in a predictable way.
Topic 11:
• There are a variety of ways to add three-digit numbers.
• There is more than one way to do a mental calculation. Techniques for doing addition or subtraction calculations mentally involve changing the numbers or the expressions so the calculation is easy to do mentally.
• There is more than one way to estimate a sum. Rounding gives one way to estimate sums.
 The standard addition algorithm for three-digit numbers breaks the calculation into simpler calculations using place value starting with the ones, then the tens, and then the hundreds.
• There is a variety of ways to subtract three-digit numbers.
 The standard subtraction algorithm for three- digit numbers breaks the calculation into simpler calculations using place value starting with the ones, then the tens, and then the hundreds. Some problems can be solved by reasoning about the conditions in the problem.
•

Unit Learning Targets

Students will be able to . .

- represent a number as specific amounts of 100s, 10s, and 1s.
- identify 10 tens as 100.
- Represent the century numbers as a 2, 3, 4, . .9 indicating the number of hundreds, followed by two zeros, representing no tens and no ones.
- Skip count by 5s and 10s to 100.
- Read and write numbers to 1,000 using base-ten numerals, number names, and expanded form.
- Use symbols <, >, and = to record the results of comparing two 3-digit numbers by decomposing the number into 100s, 10s and 1s.
- Add up to four 2-digit numbers using strategies based on place value and properties of operations.
- Count within 1,000 by 1s, 5s, 10s, and 100s beginning at any multiple of 1, 5, 10 or 100.
- apply a variety of strategies to add and subtract within 1000.
- Apply properties of place value to mentally add or subtract 10 or 100 from a given number within 100-900.
- Explain why a chosen addition or subtraction strategy works with drawings or objects.

Teacher Notes:

This unit consists of seven topics from the *enVision Math Common Core* series with anywhere from 5 to 11 lessons per topic. These seven topics address the Number and Operations – Base Ten domain of the Common Core Standards for Mathematics for Grade 2 students. In addition, these four topics address all eight of the Standards for Mathematical Practice.

Essential questions and enduring understandings were taken directly from the textbook series used by the district, *enVision Math Common Core: Realize Edition*

Unit 3 Overview		
Content Area: Mathematics		
Unit Title: Geometry		
Target Course/Grade Level: Grade 2		
Unit Summary In this unit, children continue to explore both plane and solid (3D) figures with a focus on defining attributes (number of sides, number of angles). When given a defining attribute, students are asked to draw the appropriate figure. Students then partition rectangles into equal-sized squares and then count the squares to see how many fill the rectangle. This activity lays the groundwork for learning how to calculate area in grade 3. Students continue their explorations into partitioning rectangles and circles into equal pieces and describe the equal shares, and the whole in terms of the equal shares. Students learn that equal shares must have the same area, but do not have to have the same shape. They learn specific vocabulary words with which to describe the shares of the rectangle. These activities are the precursors to fraction work in grade 3; laying the groundwork for fraction understanding.		
Primary interdisciplinary connections: Reading, Language Arts, Science, Social Studies		
 21st century themes: Critical Thinking/Problem Solving Communication Collaboration 		
Unit Rationale		
Geometry connects mathematical understandings with real-world objects and applications.		
Learning Targets		
 Standards <u>2.G.A.1</u> Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces.¹ Identify triangles, quadrilaterals, pentagons, hexagons, and cubes. <u>2.G.A.2</u> Partition a rectangle into rows and columns of same-size squares and count to find the total number of them. <u>2.G.A.3</u> Partition circles and rectangles into two, three, or four equal shares, describe the shares using the words halves, thirds, half of, a third of, etc., and describe the whole as two halves, three thirds, four fourths. Recognize that equal shares of identical wholes need not have the same shape. 		
¹ Sizes are compared directly or visually, not compared by measuring.		
Content Statements		
Reason with shapes and their attributes.		
Indicator		
 Recognize and draw shapes having a given attribute (number of angles, number of equal faces). Identify triangles, guadrilaterals, neutrogens, have some and subset 		
G.A.2 Partition a rectangle into rows and columns of same-size squares and count to find the total number.		

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Partition circles and rectangles into two, three, or four equal shares. 2.G.A.3 •

• Describe the shares using the words halves, thirds, half of, third of, etc.		
• Describe the whole as two halves, three thirds, four fourths, etc.		
Recognize that equal shares of identical wholes do not have to have the same shape.		
Unit Essential Questions	Unit Enduring Understandings Topic	
• Topic 12: How can shapes and solids be	12:	
described, compared, and used to make other shapes?	 Three-dimensional or solid figures have length, width, and height. Many can be described, classified, and analyzed by their faces or flat surfaces, edges, and vertices. Many everyday objects closely approximate standard geometric solids. A shape can be identified by the number of its sides, vertices, or angles. Rectangles can be partitioned into equal shares. A region can be divided into equal-sized parts in different ways. Equal-sized parts of a region have the same area, but not necessarily the same shape. Some problems can be solved by reasoning about the conditions in the problem. 	
Unit Learning Targets		
Students will be able to		
• Recognize shapes having a given attribute.		
• Draw shapes having a given attribute.		
 Identify triangles, quadrilaterals, pentagons, hexagons, and cubes. Dertition a restangle into rouge and columns of some size squares and count to find the total number. 		
• Partition a rectangle into rows and columns of same size squares and count to find the total number.		
• Data the words halves, thirds, half of third of to describe the equal shares.		
 Ose the words halves, thirds, hall of, the describe the equal shares. Describe the whole as two balves, three thirds, four fourths, etc. 		
Becognize that equal shares do not have to have the same shape		
Evidence of Learning		
Summative Assessment (14 days per topic)

Unit 4 Overview

Content Area: Mathematics

Unit Title: Measurement and Data

Target Course/Grade Level: Grade 2

Unit Summary

In this unit students learn the to identify the different coins that make up our monetary system, and the value of those coins. They learn to represent varying amounts of money using coin combinations and dollar bills as well as represent money amounts in writing. When writing money amounts students are taught how to correctly use the and symbols and the decimal point. Students solve problems involving two-digit money amounts, applying the addition and subtraction strategies they have learned to add and subtract whole numbers.

The measurement focus in this unit is on measuring length and height using nonstandard and standard units. Students learn to measure to the nearest whole unit using inch rulers, centimeter rulers, yardsticks and meter sticks. They learn to record these measurements to the nearest inch, foot, yard, centimeter, or meter depending upon the measuring tool used.

Students learn to take measurement data and record it on a line plot. Students continue work with pictographs and bar graphs to represent categorical data. In addition, this unit teaches students to tell time to five minutes and record time using A.M. and P.M.

Primary interdisciplinary connections: Reading, Language Arts, Science, Social Studies

21st century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

Unit Rationale

Geometric measurement connects the two most critical domains of early mathematics, geometry and number, with each providing conceptual support to the other. Measurement is central to mathematics, to other areas of

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

mathematics (e.g., laying a sensory and conceptual foundation for arithmetic with fractions),

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Learning Targets

Standards

- <u>2.MD.A.1</u> Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes.
- <u>2.MD.A.2</u> Measure the length of an object twice, using length units of different lengths for the two measurements; describe how the two measurements relate to the size of the unit chosen.
- <u>2.MD.A.3</u> Estimate lengths using units of inches, feet, centimeters, and meters.
- <u>2.MD.A.4</u> Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard length unit.
- <u>2.MD.B.5</u> Use addition and subtraction within 100 to solve word problems involving lengths that are given in the same units, e.g., by using drawings (such as drawings of rulers) and equations with a symbol for the unknown number to represent the problem.
- <u>2.MD.C.7</u> Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m.
- <u>2.MD.C.8</u> Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies, using \$ and ¢ symbols appropriately. Example: If you have 2 dimes and 3 pennies, how many cents do you have?
- <u>2.MD.D.9</u> Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units.
- <u>2.MD.D.10</u> Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple put-together, take-apart, and compare problems using information presented in a bar graph.
- <u>2.NBT.A.2</u> Count within 1000; skip-count by 5s, 10s, and 100s.
- <u>2.NBT.B.5</u> Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.
- <u>2.NBT.B.9</u> Explain why addition and subtraction strategies work, using place value and the properties of operations.

Content Statements

- Measure and estimate lengths in standard units.
- Relate addition and subtraction to length.
- Work with time and money.
- Represent and interpret data.
- Use place value understanding and properties of operations to add and subtract.
- Understand place value.

Indicators	
2.MD.A.1	Estimate or measure length using appropriate tools (inches, feet, centimeters, meters).

2.MD.A.2/A.3	Measure and object with two different units of measure (within the same system) and explain that the difference in results is due to the size of the unit of measure.							
2.MD.A.4	Compare the lengths of two objects using the same unit of measure and determine which one is longer.							
2.MD.B.5	Add and subtract within 100 in word the unknown number.	problems involving lengths using a symbol to represent						
2.MD.C.7	Tell and write time using analog and o P.M.	ligital clocks to the nearest 5 minutes using A.M. and						
2.MD.C.8	Identify, recognize, and solve word pr pennies using the \$ and the ¢ symbols	oblems with dollar bills, quarters, dimes, nickels, and appropriately.						
2.MD.D.9	Use tools of measurement to measure represent this data on a line plot with	lengths of several objects to the nearest whole inch; appropriate whole number units on the horizontal scale.						
2.MD.D.10	Draw a picture graph or bar graph wit take-apart and compare problems base	h up to four categories; solve simple put-together, ed on information in the graph.						
2.NBT.A.2	Skip count by 1s, 5s and 10s to 1000	beginning at any multiple of 5.						
2.NBT.B.5	Use a variety of strategies to add and	subtract within 100.						
2.NBT.B.9	Apply addition and subtraction strateg and explain why they work using draw	gies based on place value and properties of operations wings or objects.						
Unit Essential (Questions	Unit Enduring Understandings Topic						
• Topic 13: What	at strategies can be used to count	13:						
money?	and differences he	• Specific coins or bills each have a unique value.						
• Topic 14. Hov estimated?	v can sums and differences be	The size of a coin does not indicate its value.						
• Topic 15: What	at is the process for measuring	• Money amounts can usually be counted in different ways. When counting money, it is

questions?	used to show data and answer	• The same amount of money can often be represented using different combinations of coins and bills.						
		• Some problems can be solved by generating a list of outcomes and organizing that list in a systematic way so all outcomes are accounted for.						
		Topic 14:						
		• The process for adding money, written using cent notation, is the same as adding whole numbers.						
		• The process for subtracting money, written using cent notation, is the same as subtracting whole numbers.						
		• Rounding can be used to estimate sums and differences as can place value and number						

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

relationships.

•	Some problems can be solved by making a reasoned first try for what the answer might be, and then through additional reasoning arrive at the correct answer.
Тот	nic 15:
•	The length of some objects is measurable.
•	The length of any object can be used as a measurement unit for length, but a standard unit, such as an inch or centimeter, is always the same length.
•	The length of any object can be used as a measurement unit for length, but a standard unit is always the same length.
•	Measurement is a process of comparing a uit to the object being measured. The length of any object can be used as a measurement unit for length.
•	Measurements in the same unit such as inches, can be added or subtracted in the same way as adding and subtracting whole numbers. The measurement unit needs to be written with the sum or difference.
•	The length of any two objects can be compared by subtracting to find the difference.
•	Some problems can be solved by using objects to act out the actions in the problem.
Toj	pic 16:
•	Time can be given to the nearest five minutes. Time can be expressed using different units that are related to each other. A.M. and P.M. are used to designate certain time periods.
•	Time can be expressed as before or after the hour.
•	A calendar shows days, weeks, and months. That same time can be stated and written in more than one way.
•	Data can be organized in different ways.
•	The lengths of objects can be organized in different ways. A line plot can be used as a visual representation of the relative lengths of object.
•	Each type of graph is most appropriate for certain kinds of data. Pictographs and bar graphs make it easy to compare data.
•	Some problems can be solved by making,

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

reading, and analyzing a graph.

Unit Learning Targets *Students will be able to*...

- estimate lengths of objects
- measure lengths of objects using appropriate tools
- measure in inches, centimeters, feet, and meters
- compare measurements of an object taken with two different units of measure (within the same measurement system) and explain that the difference is due to the size of the unit chosen (there will be more inches than feet for the length of a given object because more of the smaller unit is needed)
- compare lengths of two objects measured with the same unit and determine how much longer one object is than the other.
- Add and subtract within 100 to find the solution to word problems involving length using a symbol to represent the unknown quantity.
- use a number line to find sums and differences related to length using equally spaced points on the number line.
- tell and write time using analog and digital clocks to the nearest five minutes using A.M. and P.M. notation.
- solve word problems involving dollar bills, quarters, dimes, nickels and pennies using the \$ and ¢ symbols appropriately.
- use tools of measurement to measure objects to the nearest whole unit.
- represent measurements of several objects to the nearest whole unit on a line plot with appropriate whole number units on the horizontal scale.
- draw a picture graph and bar graph with a single unit scale and up to four categories.
- solve simple put-together, take-apart, and compare problems using information represented in the graph.
- count within 1000 by ones, fives, tens and hundreds.
- choose a strategy (place value, properties of operations, inverse relationship) to add and subtract within 100.
- apply addition and subtraction strategies based on place value and properties of operations and explain why they work using drawings or objects.

Goals/Objectives	Learning Activities/Instructional Strategies	Formative Assessment Tasks
 Students: will learn to associate numerals on an analog clock face with increments of five minutes. (16-1) will read and express time in terms of quarter and half past an hour and before an hour. (16-2) will represent a set of data in a bar graph and use the bar graph to solve problems. (16-3) will use rulers to measure objects and graph the results. (16-4) will make and use a pictograph to solve problems. (16-5) will use picture graphs and bar graphs to solve problems. (16-6) 	 Interactive Math Story Topic Opener: game and vocabulary introduction Daily Review Problem-Based Interactive Learning Activity Develop the Concept: Visual Learning Guided Practice Independent Practice and Problem Solving Close/Assess and Differentiate a. lesson Quick Check b. prescribe differentiated instruction c. assess leveled homework 	 guided practice <i>Do You</i> <i>Understand</i>? question lesson <i>Quick Check</i> differentiated activities/worksheets leveled homework

LESSON

REFLECTION

Reflect on the lesson you have developed and rate the degree to which the lesson *Strongly*, *Moderately* or *Weakly* meets the criteria below.

Lesson Activities:	Strongly	Moderately	Weakly
Are challenging and require higher order thinking and problem solving skills			
Allow for student choice			
Provide scaffolding for acquiring targeted knowledge/skills			
Integrate global perspectives			
Integrate 21 st century skills			
Provide opportunities for interdisciplinary connection and transfer of knowledge and skills			
Foster student use of technology as a tool to develop critical thinking, creativity and innovation skills			
Are varied to address different student learning styles and preferences			
Are differentiated based on student needs			
Are student-centered with teacher acting as a facilitator and co-learner during the teaching and learning process			
Provide means for students to demonstrate knowledge and skills and progress in meeting learning goals and objectives			

Aligned to the New Jersey Student Learning Standards ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Provide opportunities for student reflection and selfassessment
2nd Grade Wandell School Math Curricula

Aligned to the New Jersey Student Learning Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21ST CENTURY GLOBAL SKILLS

Provide data to inform and adjust instruction to better meet the varying needs of learners
