

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Introduction

The K-5 standards provide students with a solid foundation in whole numbers, addition, subtraction, multiplication, division, fractions and decimals—which help young students build the foundation to successfully apply more demanding math concepts and procedures, and move into applications.

The standards stress not only procedural skill but also conceptual understanding, to make sure students are learning and absorbing the critical information they need to succeed at higher levels.

These standards define what students should understand and be able to do in their study of mathematics. What does mathematical understanding look like? One hallmark of mathematical understanding is the ability to justify, in a way appropriate to the student's mathematical maturity, why a particular mathematical statement is true or where a mathematical rule comes from. There is a world of difference between a student who can summon a mnemonic device to expand a product such as  $(a + b)(x + y)$  and a student who can explain where the mnemonic comes from. The student who can explain the rule understands the mathematics, and may have a better chance to succeed at a less familiar task such as expanding  $(a + b + c)(x + y)$ . Mathematical understanding and procedural skill are equally important, and both are assessable using mathematical tasks of sufficient richness.

All students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary in their post-school lives. The standards do provide clear signposts along the way to the goal of college and career readiness for all students.

#### **Gifted & Talented**

The Saddle River School District extends learning opportunities to all high achieving students. It supports the philosophy that every student has special talents and gifts. The Saddle River School District's enrichment and gifted & talented programs offer a unique approach to servicing all students while maintaining a focus on those who are identified as needing pull out services through the district's screening/criteria process. The Saddle River School District's enrichment program focuses on bringing out the special talents in all learners as enrichment instruction is delivered to all students in grades kindergarten through fifth grade. The program follows the Joseph Renzulli schoolwide enrichment model that concentrates on "schools being a place for talent development," (Renzulli, 1994). The program follows a wide-range of enriching/developing activities based upon student strengths and interests. Additionally, the program focuses on enriching activities across the curriculum in providing complementary and developing features/standards for all subject areas. The enrichment program builds upon existing student learning standards in all content areas in coordination with instruction and student needs.

The Saddle River School District Gifted & Talented program offers pull-out instruction for those students meeting the multiple measures and specific criteria set forth and approved by the board of education. The

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

identification process may/can begin as early as kindergarten. The gifted and talented program follows the central theme that all appropriate curriculum standards are followed and that those standards are the foundation for developing student learning opportunities and standards across the curriculum. The gifted and talented program will provide the following in coordination with each content area when and where appropriate:

- Develop students' abilities and engage critical thinking skills
- Expand students' creative thought process and responses
- Advance students' research skills needed to become independent learners
- Develop students' abilities to self-evaluate their own learning process
- Enrich students' abilities in seeking and expanding their own knowledge in subject content areas and individual talents
- Develop students' ability to interact effectively in small-group and large-group setting
- Heighten students' ability in expanding on student learning standards to strengthen appropriate skills necessary for 21st century learning

### English Language Learners (ELL)

The Saddle River School District recognizes the importance of increasing language proficiency while gaining confidence and strength so that academic goals and New Jersey state learning standards can be met. English Language Learners in the Saddle River School District are identified through a multitude of measures. These measure include, but are not limited to: a home language survey, parental conferencing, and daily teacher observations. Based on the information/data collected, the Saddle River School District will determine if a formal approved language assessment is necessary. The World-Class Instructional Design and Assessment (WIDA) is the assessment tool for those students recommended for ELL testing.

The Saddle River School District will provide the following accommodations for ELL students:

- Basic skills with a focus a the specific language skills
- Use of a translation dictionary (ipad, google translator, bilingual word to word dictionary)
- Preferential seating
- Extended time and/or modified classroom assignments
- Print out of teacher notes/lessons for additional review
- Extended time and/or modified assessments
- Extended time/accommodation for standardized testing in coordination with state regulations

### Special Education Students

The Saddle River School District special education department offers a full continuum of services for students who are eligible for special education services. In order to meet the specific requirements for each learner, programs are developed so that that social, emotional and educational needs are met within the least restrictive environment. The specific program for each learner is based on individual needs where goals and objectives are set and followed accordingly. These individual educational plans follow a specific plan that is aligned to the student learning standards and may include, but is/are not limited to:

- Individual education plan
- Pull-out support
- Replacement content instruction
- In-class support

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

- Instructional aide(s)
- Support services (i.e.; speech, physical therapy, occupational therapy)
- Presentation accommodations (i.e.; notes, outlines, instructions, lists, organization)
- Response accommodations (i.e.; dictations, audio, dictionaries, calculation devices, scribes)
- Setting accommodations (i.e.; lighting, acoustics, seat placement, testing, sensory tools)
- Timing accommodations (i.e.; completing tasks, frequent breaks, processing directions)
- Scheduling accommodations (i.e.; spacing out projects/assignments, order of schedule)
- Organizational accommodations (i.e.; highlighter, time management, planning)
- Assignment modifications (i.e.; fewer tasks, alternate questions)
- Technology support (i.e.; ipad, word processing, specific programs/apps)
- Testing accommodations (i.e.; extended time, placement, seating, time)

Students who require additional services outside of the district's resource program, may require an out-of-district placement. In this event, the Child Study Team will coordinate accordingly to ensure that all necessary learning standards are being met.

### **Students in Danger of Failing**

For those students in danger of failing, the Saddle River School District has a specific referral process to ensure that student needs are being met. The Intervention & Referral Services (I&RS) is an interdisciplinary team of professional within the school that addresses a full range of student/staff needs and concerns. This process is designed to maximize student success and establish goals and benchmarks to promote outcomes that positively reflect academics, health, behavior, self-esteem, work habits and strong character. The I&RS team is comprised of a chairperson, child study team member, teachers and other school professionals so that a continuous system of support can be provided. The team provides a plan so that short and long term goals can be established and strategies can be implemented and designed specifically for each student. In trying to achieve success, the team works collaboratively in making growth for each student a top priority and adhere to a plan that is achievable but rigorous. This plan, as set by New Jersey I&RS Team Process, may contain, but is not limited to the following;

- Request for assistance
- Information collection
- Parent Notification
- Problem solving within the I&RS team
- Developing an I&RS action plan
- Supporting, evaluating and continuing the process

In evaluating and monitoring students, the I&RS team closely calculates a plan so that curriculum needs can be met. In order to achieve and demonstrate success, the Saddle River School District provides modifications and support so that consideration is given to, but not limited to, the following:

- Student strengths/weaknesses
- Classroom and standardized assessments
- Academic records
- Social and behavioral patterns
- Previous history or concern
- Participation in class (and interaction with peers)
- Health related concerns
- Family concerns
- Retention of information/instruction

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

- Student interests
- Independent & group work habits
- Emotional status
- Study habits (at home/school)
- Present level of functioning
- Expectations (academic, social, behavioral, etc.)
- Following classroom rules/directions/procedures

As the I&RS team formulates a plan, many ongoing concerns are addressed within the team and may include parental notification/input. The problem solving objectives as set forth by New Jersey I&RS Team Process will:

- Describe the problem
- Identify the priority
- Develop objectives
- Review previous interventions
- Create new strategies
- Analyze and evaluate solutions

The Saddle River School District continues to inform and update staff of the I&RS procedures. The procedures are as follows:

- Teacher recognizes a problem(s) with a particular student in class and refers the student to the I&RS committee by filling out the appropriate paperwork. An I&RS meeting is scheduled to and the committee and appropriate staff members gather to discuss and begin the proactive process of assistance.
- Information from the teacher(s), administrator(s), and other school personnel is collected.
- Parent notification where/when appropriate
- The I&RS team begins the problem solving process by offering ideas and suggestions pertaining to the problems while prioritizing the most important issues.
- The I&RS team develops an action plan with specific strategies that can be implemented to achieve both short term and long term goals.
- The I&RS team meets regularly to evaluate and support the action plan (and to adjust accordingly when/where appropriate). Parents are notified on an ongoing basis to continue communication in the support of implementing the strategies set forth in the action plan.

Basic Skills Instruction is also a valuable resource that the Saddle River School District uses to meet the needs of struggling students. Students who require additional academic support will be offered that assistance in all subject areas. This system allows the students to receive in-class or pull-out support when and where appropriate so that grade level curriculum and student learning goals can be met. This program is an intervention system used to create a positive and constructive learning environment so that students can achieve success.

After the I&RS action plan has been in place the team may continue with the current strategies, offer/discuss new strategies or decide that the student should be referred to the district's child study team. In the instance of referring a student to the child study team, it can be concluded that many of the strategies from the action plan were not benefitting the student as intended. The child study team then would follow the guidelines for the referral process and notify the parents/guardians of the potential special education recommendation.

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

**Unit 1 Overview**

**Content Area: Mathematics**

**Unit Title:** Counting and Cardinality

**Target Course/Grade Level: Kindergarten**

**Unit Summary**

In this unit students learn that numbers can be used for different purposes, numbers can be classified, and represented in different ways. In **Topic 1** students learn that the arrangement of objects in a group does not affect the number of objects in that group, known as the *conservation of number*. As the students explore various arrangements of a given number of objects they develop a variety of visual representations for each number which leads to the ability to recognize quantities up to 5 without counting, a skill that is known as *subitizing*. Students learn to keep track of what is counted by placing a counter on each item as it is counted. Students also learn how to write numerals and by saying the number name while writing, connect the written numeral with the number name.

**Topics 2 & 4** introduce and reinforce the concept that numbers and quantities can be compared and related to other numbers and quantities in different ways. Students learn the concepts of *more*, *fewer*, and *the same* by using one-to-one correspondence to match objects in two groups. If all objects in one group match one, and only one, other object in a second group, children recognize that the two groups contain the same quantity. Children continue to match objects in two groups to determine which group has *1 or 2 more* objects and which group has *1 or 2 fewer* objects. This experience is used to order numbers sequentially while learning number names and symbols, for quantities from 0 to 5. They begin to answer questions such as, “Which number comes before 3?” and “Which number comes after 4?”

In **Topics 3 & 4** children use numbers for different purposes, classify numbers, and represent them in different ways. Students apply counting and comparing sets skills to the task of ordering the numbers through ten. Children use ten-frames to learn to visualize the relationship between ten and numbers less than ten. Using the ten-frames allows children to develop visual representations of numbers as a whole made from different parts. For example, six can be seen as “a set of five, and one more” which leads to mental math processes and the understanding of equivalent expressions in algebra.

**Topic 4** explores the concept that real numbers can be associated with a unique point on a number line. **Topic 5** strengthens children’s ability to connect number names, the count sequence, and quantity and has children exploring the relationships between 10 and the numbers to 20.

In **Topic 6**, students use a hundred chart to observe counting patterns, and learn to count to 100 by ones and tens, as well as connecting groups of ten to the words for the decade numbers. Children begin to see the importance of groups of ten which will later lead to place value understandings.

**Primary interdisciplinary connections:** Reading, Social Studies, Science, Writing, Dramatic Play, Physical Education, Art

**21<sup>st</sup> century themes:**

- Critical Thinking/Problem Solving
- Communication
- Collaboration

### **Unit Rationale**

Counting and Cardinality and Operations and Algebraic Thinking are about understanding and using numbers. Counting and Cardinality underlies Operations and Algebraic Thinking as well as Number and Operations in Base Ten. It begins with early counting and telling how many in one group of objects. Addition, subtraction, multiplication, and division grow from these early roots.

**Learning Targets**

**Standards for Mathematical Content**

- K.CC.A.1 Count to 100 by ones and by tens.
- K.CC.A.2 Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
- K.CC.A.3 Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).
- K.CC.B.4a When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.
- K.CC.B.4b Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted.
- K.CC.B.4c Understand that each successive number name refers to a quantity that is one larger.
- K.CC.B.5 Count to answer "how many?" questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1-20, count out that many objects.
- K.CC.C.6 Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.
- K.CC.C.7 Compare two numbers between 1 and 10 presented as written numerals.

**Standards for Mathematical Practice**

- Make sense of problems and persevere in solving them.
- Reason abstractly and quantitatively.
- Construct viable arguments and critique the reasoning of others.
- Model with mathematics.
- Use appropriate tools strategically.
- Attend to precision.
- Look for and make use of structure.
- Look for and express regularity in repeated reasoning.

(Source: <http://www.state.nj.us/education/cccs/2016/math/standards.pdf>)

**Content Statements**

- Know number names and the count sequence.
- Count to tell the number of objects.
  - Understand the relationship between numbers and quantities; connect counting to cardinality.
- Compare numbers

K.CC.A.1	Count to 100 by ones and tens.

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

K.CC.A.2	Count forward beginning from a given number within the known sequence, instead of having to begin again at 1.
K.CC.A.3	Represent the number of objects by the correct numeral up to 5 (using zero to represent no objects).

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

K.CC.B.4a	Assign an ascending number name for each object in a group.
K.CC.B.4b	For objects named in the standard order, identify the last number named as the number of counted objects in the set regardless of the order they are counted).
K.CC.B.4c	Understand that each successive number name refers to a quantity that is one larger.
K.CC.B.5	Answer “how many?” questions about groups of objects up to 10 when arranged in a line or up to 5 in a scattered configuration.
K.CC.C.6	Identify whether the number of objects in a group is greater than, less than or equal to the number of objects in another group, e.g., by using matching and counting strategies. (Includes groups with up to ten objects)
K.CC.C.7	Compare two numbers between 1 and 10 presented as written numerals.
K.OA.A.1	Represent addition and subtraction with objects, fingers, mental images, drawings, sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.

### Unit Essential Questions

- Topic 1: How can numbers from 1 to 5 be counted, read, and written?
- Topic 2: How can numbers from 0 to 5 be compared and ordered?
- Topic 3: How can numbers from 6 to 10 be counted, read, and written?
- Topic 4: How can numbers from 0 to 10 be compared and ordered?
- Topic 5: How can numbers to 20 be counted, read, and written?
- Topic 6: How can numbers to 100 be counted using a hundred chart?

### Unit Enduring Understandings Topic

#### 1:

- Counting tells how many are in a set, regardless of their arrangement or the order in which they were counted.
- The last number said when counting a set is the total.
- Counting is cumulative.
- There is a unique symbol that goes with each number word.
- Some problems can be solved by using objects to act out the actions in the problems.

#### Topic 2:

- If objects in two different groups are matched one-to-one, and no objects are left over, the two groups contain the same number of objects. If one group has objects left over (without a match) that group has more objects.
- *1 more than* or *2 more than* expresses the relationship between two groups of objects.
- *1 fewer than* or *2 fewer than* expresses the relationship between two groups of objects.
- If after comparing two groups of objects, one group has objects left over, it can be said that the group with objects left over has *more*, and the other group has *fewer* objects.
- In a pair of numbers, the number that represents a group with more objects is *greater*, while the number representing the other group is *less*.
- *Zero* is a number that tells that a group has no objects.
- There is a specific order to the set of whole

# Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

numbers.

### Topic 3:

- Counting tells how many are in a set no matter which order the objects are counted. The last number said when counting a set is the total. Counting is cumulative.
- There is a unique symbol that goes with each number word.
- In a growing pattern, there is a predictable and countable change from one part to the next.

### Topic 4:

- In a pair of numbers, the number that shows more is greater. The number that shows fewer is less.
- The numbers 5 and 10 can be used as benchmarks to compare numbers.
- *1 more than, 2 more than, 1 fewer than, and 2 fewer than* express relationships between two numbers.
- There is a specific order to the set of whole numbers.
- A number can be shown by a unique point on a number line. The distance between any two consecutive whole numbers on a given number line is always the same.
- Some problems can be solved by using objects to act out the actions in a problem.

### Topic 5:

- There is a unique symbol that goes with each number word.
- Counting tells how many are in a set, regardless of their arrangement or the order in which they were counted. The last number said when counting a set is the total. Counting is cumulative.
- Some problems can be solved by reasoning about conditions in the problem.

### Topic 6:

- Counting tells how many are in a set, regardless of their arrangement or the order in which they were counted. The last number said when counting a set is the total. Counting is cumulative.
- Numbers are counted and written in a specific sequence on a hundred chart.

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

- The decade numbers are built on groups of ten. The oral names are similar to, but not the same as, the number of tens counted.
- Counting patterns (numerical and visual) can be seen on a hundred chart.
- Some problems can be solved by identifying elements that repeat in a particular way.

### Unit Learning Targets

*Students will ...*

- count and represent with a written numeral a number of objects to 20.
- write numerals from zero to 20.
- assign an ascending number name for each object in a group.
- identify the last number named as the number of counted objects in a group.
- answer “how many?” questions about groups of objects.
- create addition and subtraction events with objects (or make drawings) to represent a sum (putting together) or a difference (taking from) up to 10.
- count forward beginning from any given number up to 50 – instead of having to begin at 1.
- identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group (groups of up to 10 objects).
- count to 100 by ones and tens.
- compare numbers (up to 10) written as numerals.

### Evidence of Learning

#### Summative Assessment (14 days per topic)

- Topics 1 – 6 Tests and Performance Assessments

**Materials needed:** as per teacher’s edition

### Differentiation (Topic 1, pg 1E) ELL:

- Repeating oral language practice of the number words for 1 through 5 will help English Language Learners remember and understand number words.
- Write the number words on the board with the corresponding numerals. Have children draw an object to illustrate each word. Relate these illustrations to the word's mathematical definition.

### Special Needs:

- Review the relationship between counting and written numerical symbols.
- Use common classroom objects (crayons, paper clips, etc.) that can easily be counted (1 to 5) to model the relationship between the group of objects and the written numerical symbol.
- Repeat daily using consistent math vocabulary such as *number* and *count*.

### Below Grade Level:

- The ability to recite the number names in order does not guarantee understanding of the numbers, therefore, children should move objects in a set as they recite the counting sequence so that the number they are saying is reflected in the set of objects they have moved.
- Provide numerous opportunities for children to practice physically representing the numbers 1 to 5 with classroom objects.

### Advanced/Gifted:

- Provide ample opportunities for children to practice counting to 5 and to practice reading and writing the numerals 1 through 5 using both concrete and abstract representations of these quantities.

### Resources Provided

- enVision Math: Topics 1 - 6 Teacher Guides, digital resources, manipulatives

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Differentiation (Topic 2, TE pg. 21C) ELL:

- Repeating oral language practice of terms will help English Language Learners remember and understand the words and associate them with concepts.
- Write the numeral 1 on the board have the children hold up 1 object and say the word *one*. Repeat with numerals 2-5.
- Write the words *1 more* and *2 more* on the board. Read each term together with children and help them illustrate each term with manipulatives. Repeat with *1 fewer* and *2 fewer*.
- Write the word *order* on the board. Model how to order the numerals 0 to 5. Then ask children to trace the number that comes after 4 with red chalk. Continue with other numbers.

### Special Needs:

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

- Review with children the concepts of *more*, *fewer*, and *same*.
- Use manipulatives to demonstrate these concepts and ask children to replicate your model. Focus on the comparison of the two groups using math words *more* and *fewer* to describe them.
- Use a variation of this activity to demonstrate the concept of *same as* by creating groups with equal number of objects.

### **Below Grade Level:**

- Help children understand that they can build on the concepts of *equal groups* and *more* introduced in Topic 2.
- Show a group of objects such as 4 cubes. Model for children how to make a group that has *1 more* object than another group, or *1 fewer* object.
- Provide numerous opportunities for children to practice making groups that have *1 more*, *2 more*, *1 fewer*, and *2 fewer*.

### **Advanced/Gifted:**

- Write two different numbers from 0 to 5 on the board. Ask children to draw sets of dots for the numbers, then circle the larger number.

### **Resources Provided**

- enVision Math: Topics 1 - 6 Teacher Guides, digital resources, manipulatives
-

what comes next. (3-7)		
------------------------	--	--

**Differentiation (Topic 3, TE pg. 45C) ELL:**

- Repeating oral language practice of terms will help English Language Learners remember and

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

understand the words and associate them with concepts.

- Write the numeral 6 on the board, point to the numeral, and have children repeat the word as you count out 6 objects. Repeat with numerals 7 through 10.
- Place 10 dried beans in a row. Have children count with you as you point to each one. Repeat with a row of 9, a row of 8, etc.
- Draw a number line from 0 through 10 on the board. Have children start a 0 in a whisper and make their voices increasingly louder until they are shouting 10.

### Special Needs:

- Review with children the numbers 6 through 10 and the quantities represented by each.
- Using various manipulatives, demonstrate a set of 6 objects and have children count them. Have children hold 6 objects and count them as they put them in a row. Then have children make their own set of 6 using different objects.
- Use mathematical terms: *count* and *number* as you describe the process; repeat daily
- Repeat with sets of 7 through 10.

### Below Grade Level:

- Provide opportunities for children to recognize sets of objects with varying quantities and to count the objects in those sets.
- Provide opportunities for children to create sets of objects representing the numbers 1 through 10.

### Advanced/Gifted:

- Introduce the mathematical language and symbols for simple addition to those children who quickly grasp the concept of quantity represented by written symbols.

### Resources Provided

- enVision Math Common Core: Topics 1 - 6 Teacher Guides
-

**Unit 2 Overview**

**Content Area: Mathematics**

**Unit Title:** Operations and Algebraic Thinking

**Target Course/Grade Level: Kindergarten**

**Unit Summary**

In this unit, children begin to quantify the world around them and express everyday experiences as number relationships, then more formally as numerical expressions and equations. Students understand addition to be the joining of two sets of similar items. As students verbally express the joining of two groups, they lay the “foundation for the symbolic representation of addition.” (enVision Math, pg. 125B)

Students then apply this same verbal expression to situations that compare, that involve separating one group into smaller groups, and those situations that involve taking away a part of a larger group. Students first model these situations with concrete objects and verbal descriptions, then putting pencil to paper, draw pictures to model the situation, and then represent the models and drawings with symbols. It is in this unit that students are introduced to the plus sign (+), the minus sign (-), and the equals sign (=).

Students learn that the value of the number sentence on one side of the equal sign must be the same as the value of the number sentence on the opposite side of the equal sign. Children learn that the equal sign serves as the balance point in the number sentence, not just an indicator of the “answer.”

Also in this unit, children learn that number quantities can be represented in many different ways and develop “number sense” as well as deepening their understanding that numbers represent quantities.

**Primary interdisciplinary connections:** Reading, Social Studies, Science, Writing, Dramatic Play, Physical Education, Art

**21<sup>st</sup> century themes:**

- Critical Thinking/Problem Solving
- Communication
- Collaboration

**Unit Rationale**

Operations and Algebraic Thinking deals with the basic operations—the kinds of quantitative relationships they model and consequently the kinds of problems they can be used to solve as well as their mathematical properties and relationships. These understanding form the foundation for all further mathematics work and encourage children to think of numbers and arithmetic as a method for describing the world around them.

**Learning Targets**

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Standards for Mathematical Content

- K.OA.A.1 Represent addition and subtraction up to 10 with objects, fingers, mental images, drawings, sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.
- K.OA.A.2 Solve addition and subtraction word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem.
- K.OA.A.3 Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

using objects or drawings, and record each decomposition by a drawing or equation (e.g.,  $5 = 2 + 3$  and  $5 = 4 + 1$ ).

- K.OA.A.4 For any number from 1 to 9, find the number that makes 10 when added to the given number, e.g., by using objects or drawings, and record the answer with a drawing or equation.
- K.OA.A.5 Demonstrate fluency for addition and subtraction within 5.
- K.CC.C.6 Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies. (groups up to 10 objects)
- K.MD.B.3 Classify objects into given categories; count the numbers of objects in each category and sort the categories by count.

### Standards for Mathematical Practice

- Make sense of problems and persevere in solving them.
- Reason abstractly and quantitatively.
- Construct viable arguments and critique the reasoning of others.
- Model with mathematics.
- Use appropriate tools strategically.
- Attend to precision.
- Look for and make use of structure.
- Look for and express regularity in repeated reasoning.

(Source: <http://www.state.nj.us/education/cccs/2016/math/standards.pdf>)

### Content Statements

- Understand addition, and understand subtraction.
- Compare numbers
- Classify objects and count the number of objects in each category.

### Topic/Lesson Plans

Topic	Timeframe
Topic 7 <i>Understanding Addition</i>	14 days
Topic 8 <i>Understanding Subtraction</i>	14 days
Topic 9 <i>More Addition and Subtraction</i>	14 days

**Teacher Notes:**

This unit consists of 3 topics from the *enVision Math Realize* series with anywhere from 7 to 9 lessons per topic. These six topics address the Operations and Algebraic domain of the Standards for Mathematics for Kindergarten students. In addition, these 3 topics address all eight of the Standards for Mathematical Practice.

Essential questions and enduring understandings were taken directly from the textbook series used by the district, *enVision Math: Common Core Realize Edition*.

### Differentiation (Topic 8, TE pg. 145C)

#### ELL:

- Provide extra practice working with the + and = symbols.
- Write the subtraction sentence  $8 - 3 = 5$  on the board. Have children come to the board and circle the minus and equals symbols in the sentence and say the words *minus* and *equals* as they circle them.
- Write the symbols “-“ and “=” on the board. Write the words *minus* and *equals* below the symbols. Have children draw lines to connect the word with correct symbol and then repeat the words orally.
- Say a subtraction sentence, such as “7 minus 4 equals 3.” Call on children to write the sentence on the board using the symbols “-“ and “=”.

#### Special Needs:

- Review the “-“ and “=” symbols and their meanings.

#### Below Grade Level:

- Connect the sentence *5 take away 3 is 2* with the number sentence  $5 - 3 = 2$ .
- Provide extra practice working with the “-“ and “=” symbols.
- Remind children that when they use + they will have more than they started with; when they use “-“, they will have less than they started with.

#### Advanced/Gifted:

- Have children write out subtraction sentences with more complex math stories.
- Encourage mental math.

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### **Differentiation (Topic 9, TE pg. 167C) ELL:**

- Write the addition sentence  $2 + 3 = 5$  on the board. Underline the symbols as you read the number sentence aloud, then have children repeat the words as you touch each symbol on the board.

### **Special Needs:**

- Provide larger ten-frames to children or allow them to work with a partner.

### **Below Grade Level:**

- When saying a number sentence aloud, always write the number sentence on the board and model it with illustrations or manipulatives.
- Provide many opportunities for children to model addition number sentences using concrete objects. Say number sentences slowly so children can use the manipulative at the appropriate time.

### **Advanced/Gifted:**

- Challenge children to think algebraically by writing number sentences with missing addends. Have children write or say the missing addend.
- Have children compare addition expressions to determine which expression represents more objects. Encourage children to draw pictures to solve.

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

## Unit 3 Overview

**Content Area: Mathematics**

**Unit Title:** Number and Operations in Base Ten

**Target Course/Grade Level: Kindergarten**

### Unit Summary

This unit introduces children to the concept of grouping by tens and representing quantities as a group of ten, and some more. Children continue to build number sense by composing and decomposing the teen numbers into one 10 and some more ones. Representing the composition and decomposition of numbers also strengthens the role of the equal sign as the balance point between two quantities. When children compose and decompose numbers, they are not looking for “answers” but for two quantities that are in fact equal, but represented in different ways on either side of the equal sign.

During this unit, children become familiar with the use of double ten-frames. The use of the double ten- frame makes the grouping of one 10 and some more ones obvious and intuitive. Students connect the model with the number sentence as they practice recording their actions as number sentences.

**Primary interdisciplinary connections:** Reading, Social Studies, Science, Writing, Dramatic Play, Physical Education, Art

### 21<sup>st</sup> century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

### Unit Rationale

The focus of this unit is the composition and decomposition of the teen numbers 11-19. The focus is on the realization that teen numbers can be composed of one group of 10 and another group that contains less than 10 objects. This focus on groups of ten lays the foundations for place value understandings while continuing to build number sense and continuing to have children represent their world with number sentences.

## Learning Targets

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Standards for Mathematical Content

- K.NBT.A.1 Compose and decompose numbers from 11 to 19 into ten ones and some further ones, e.g., by using objects or drawings, and record each composition or decomposition by a drawing or equation (such as  $18 = 10 + 8$ ); understand that these numbers are composed of ten ones and one, two, three, four, five, six, seven, eight, or nine ones.

### Standards for Mathematical Practice

- Make sense of problems and persevere in solving them.
- Reason abstractly and quantitatively.
- Construct viable arguments and critique the reasoning of others.
- Model with mathematics.
- Use appropriate tools strategically.
- Attend to precision.
- Look for and make use of structure.
- Look for and express regularity in repeated reasoning.

**ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS**

**Differentiation (Topic 10, TE pg. 167C)**

**ELL:**

- Spend additional time connecting the quantity eleven with the number name eleven, and with the quantity twelve and the number name twelve as these number names do not follow the same pattern as the rest of the “teen” number names.

**Special Needs:**

- Provide larger ten-frames to children or allow them to work with a partner.
- If writing numerals and numbers is difficult, have students use number cards that can be placed on answer blanks; or use numeral rubber stamps and ink pads.

**Below Grade Level:**

- Model the connection between 10 ones and a group of ten often. Point out that 10 individual items can be brought together as *1 group* of 10 items.

**Advanced/Gifted:**

- Compare teen numbers: Which is greater? How much greater?
- Have children brainstorm objects that come in groups of ten, draw pictures and share with class.

**Resources Provided**

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

## Unit 4 Overview

**Content Area: Mathematics**

**Unit Title:** Measurement and Data

**Target Course/Grade Level: Kindergarten**

### Unit Summary

In this unit, students investigate objects and notice how they are alike (same) or different. As observations continue, students notice more specific attributes of the object such as color, size, and shape. As the unit progresses, more attributes are noticed and explored, such as length, height, weight, and capacity.

Students learn the math language that will let them describe objects according to their attributes and compare one object to another. Students then sort objects according to a given attribute. Students notice that objects have more than one attribute that can be compared, and describe one object in relation to another object using words such as *taller*, *shorter*, *longer*, *tallest*.

**Primary interdisciplinary connections:** Reading, Social Studies, Science, Writing, Dramatic Play, Physical Education, Art

### 21<sup>st</sup> century themes:

- Critical Thinking/Problem Solving
- Communication
- Collaboration

### Unit Rationale

Geometric measurement connects the two most critical domains of early mathematics, geometry and number, with each providing conceptual support to the other. Measurement is central to mathematics, to other areas of mathematics (e.g., laying a sensory and conceptual foundation for arithmetic with fractions), to other subject matter domains, especially science, and to activities in everyday life.

## Learning Targets

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Standards for Mathematical Content

- K.MD.A.1 Describe measurable attributes of objects, such as length or weight. Describe several measurable attributes of a single object.
- K.MD.A.2 Directly compare two objects with a measurable attribute in common, to see which object has "more of"/"less of" the attribute, and describe the difference. *For example, directly compare the heights of two children and describe one child as taller/shorter.*
- K.MD.B.3 Classify objects into given categories; count the numbers of objects in each category and sort the categories by count.

### Standards for Mathematical Practice

- Make sense of problems and persevere in solving them.
- Reason abstractly and quantitatively.
- Construct viable arguments and critique the reasoning of others.
- Model with mathematics.
- Use appropriate tools strategically.

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

- Attend to precision.
- Look for and make use of structure.
- Look for and express regularity in repeated reasoning.

(Source: <http://www.state.nj.us/education/cccs/2016/math/standards.pdf>)

### Content Statements

- Describe and compare measurable attributes.
- Classify objects and count the number of objects in each category.

(Source: <http://www.state.nj.us/education/cccs/2016/math/standards.pdf>)

K.MD.A.1	Describe measurable attributes of objects, such as length or weight. Describe several measure attribute of a single object.
K.MD.A.2	Directly compare and describe two objects with a measurable attribute in common using “more of” /”less of” the attribute. For example, directly compare the heights of two children and describe one child as taller/shorter.
K.MD.B.3	Classify objects into given categories; count the objects in each category; and sort the categories by count. (up to 10 objects in a group).

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Unit Essential Questions

- Topic 12: How can objects be compared and ordered by length, height, and weight?
- Topic 13: What are different ways objects can be grouped?

### Unit Enduring Understandings Topic

#### 12:

- Objects have measurable attributes such as length, capacity, and weight that can be compared and described.
- Objects can be compared by length.
- Objects can be compared by height. Comparing by height is similar to comparing by length.
- Objects can be compared by capacity.
- Objects can be compared by weight.
- Some problems can be solved by making a reasoned first try for what the answer might be and then, through additional reasoning, arrive at the correct answer.

#### Topic 13:

- Attributes can be used to compare objects.
- Attributes can be used to sort a group of objects.
- Attributes such as color, shape, or size can be used to sort the same set of objects in different ways.
- A set of objects can be sorted according to a combination of attributes.
- Some problems can be solved by reasoning about conditions in the problem.
- Data can be collected and represented using

 ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

**Differentiation (Topic 12, TE pg. 221C)**

**ELL:**

- Show the vocabulary cards for the words *shorter* and *longer*. Have children repeat the words with you. Display in size order 3 different-colored pieces of yarn. Hold up the card for *shorter* and have children repeat the word with you.
- Draw pictures of monkeys on the board with different sized tails. Have children use the words *longer, shorter, longest, shortest* to describe the tails.
- Show children a 3-cube train. Have children make cube trains that are shorter than the 3-cube train. Have them say aloud the words *shorter* and *longer*.

**Special Needs:**

- Review the words *longer* and *as long as* with students.
- Direct 8 children to form 2 equal lines as if they were leaving the room. Ask other children to describe the lines. Ask if one line is *as long as* the other line.
- Move 2 children from line 1 to line 2. Ask which line is *longer*.
- Point out *longer/shorter/same length* lines of children throughout the day.

**Below Grade Level:**

- Model the words *shorter, longer, as long as* using yarn of different colors and lengths.
- Give partners yarn of different colors and sizes and have them model as above.

**Advanced/Gifted:**

- Ask children to order 3 cube trains by length, then write and order the numbers that represent the trains.
- Hold up an object and ask students to find an object that is *longer/shorter/as long as* the object being held up.

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Differentiation (Topic 13, TE pg. 243C)

#### ELL:

- Repeat oral language practice of the attribute words commonly used for sorting: *color, size, shape*. Make sure that children understand that these words describe categories and are used to describe how the objects are alike and different.
- Show vocabulary cards for the words *same* and *different*. Have children say the words with you. Show 2 objects that are the same and 2 that are different pointing out the vocabulary words.
- Hold out another 2 objects, have children state whether they are the *same* or *different*. Have students put the objects on the correct vocabulary card and say the word. Repeat with other sets of objects.

#### Special Needs:

- Review the words *large* and *small*
- Demonstrate examples of large and small objects whose other attributes are the same (i.e., large and small paper clips).
- Make sure that children know that size tells *how big*, and that *large* and *small* describe the object.
- Ask children to find objects that are the same color but a different size. Discuss the examples.

#### Below Grade Level:

- Reinforce the concept that objects have more than one attribute.
- Show an object; have children identify the shape, then the color.
- Model how to draw a circle, square, triangle, and rectangle one at a time. Children will draw the shapes on paper; identify the shapes using the correct shape names.
- Have children color the shapes and identify the shape name and its color.

#### Advanced/Gifted:

- Have children sort using other categories (wild animals, tool, vehicles).
- As children sort shapes, have them describe physical attributes such as number of sides.

**Unit 5 Overview**

**Content Area: Mathematics**

**Unit Title:** Geometry

**Target Course/Grade Level: Kindergarten**

**Unit Summary**

This unit begins with children “explor(ing) the geometric world in which they live” (enVision Topic 14 pg. 263A) and begin to understand that objects in their environment are composed of shapes. At first children focus on the whole shape, then move on to notice attributes and learn the language that will help them describe these shapes. Students then move on to learning to describe positions and locations of the geometric shapes they see. At first, spatial learning is accomplished through physical activities such as stacking blocks, rolling spheres, etc. and describing the location of the objects. In the last topic of the unit, children focus on specific properties of shapes and use these properties to compare shapes.

**Primary interdisciplinary connections:** Reading, Social Studies, Science, Writing, Dramatic Play, Physical Education, Art

**21<sup>st</sup> century themes:**

- Critical Thinking/Problem Solving
- Communication
- Collaboration

**Unit Rationale**

Like core knowledge of number, core geometrical knowledge appears to be a universal capability of the human mind. Geometric and spatial thinking are important in and of themselves, because they connect mathematics with the physical world, and play an important role in modeling phenomena whose origins are not necessarily physical, for example, as networks or graphs. They are also important because they support the development of number and arithmetic concepts and skills. Thus, geometry is essential for all grade levels for many reasons: its mathematical content, its roles in physical sciences, engineering, and many other subjects, and its strong aesthetic connections.

**Learning Targets**

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

### Standards for Mathematical Content

- K.G.A.1 Describe objects in the environment using names of shapes, and describe the relative positions of these objects using terms such as *above*, *below*, *beside*, *in front of*, *behind*, and *next to*.
- K.G.A.2 Correctly name shapes regardless of their orientations or overall size.
- K.G.A.3 Identify shapes as two-dimensional (lying in a plane, "flat") or three-dimensional ("solid").
- K.G.B.4 Analyze and compare two- and three-dimensional shapes, in different sizes and

## Kindergarten Wandell School Math Curriculum

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

orientations, using informal language to describe their similarities, differences, parts (e.g., number of sides and vertices/"corners") and other attributes (e.g., having sides of equal length).

- **K.G.B.5** Model shapes in the world by building shapes from components (e.g., sticks and clay balls) and drawing shapes.
- **K.G.B.6** Compose simple shapes to form larger shapes. *For example, "Can you join these two triangles with full sides touching to make a rectangle?"*

### Standards for Mathematical Practice

- Make sense of problems and persevere in solving them.
- Reason abstractly and quantitatively.
- Construct viable arguments and critique the reasoning of others.
- Model with mathematics.
- Use appropriate tools strategically.
- Attend to precision.
- Look for and make use of structure.
- Look for and express regularity in repeated reasoning.

(Source: <http://www.state.nj.us/education/cccs/2016/math/standards.pdf>)

### Content Statements

- Identify and describe shapes.
- Analyze, compare, create, and compose shapes.

(Source: <http://www.state.nj.us/education/cccs/2016/math/standards.pdf>)

CPI #	<b>Cumulative Progress Indicator (CPI)</b> <b>Source: NJDOE Model Curriculum for Mathematics</b>
K.G.A.1	Describe objects in the environment using names of shapes, and describe the relative positions of these objects using terms such as <i>above, below, beside, in front of, behind, and next to</i> .
K.G.A.2	Correctly name shapes regardless of their orientation or overall size.
K.G.A.3	Identify shapes as two-dimensional (lying in a plane, "flat") or three-dimensional ("solid").
K.G.B.4	Analyze and compare two- and three-dimensional shapes in different sizes and orientations by counting sides or vertices ("corners") or comparing attributes such as side lengths.
K.G.B.5	Model shapes in the world by building shapes from components (e.g., sticks and clay) and drawing shapes.
K.G.B.6	Compose simple shapes to form larger shapes. <i>For example,,: can you join these two triangles with full sides touching to make a rectangle?</i>

### Summative Assessment (14 days per topic)

- Topics 14-16 Tests and Performance Assessments

**Materials needed:** as per teacher's edition

### Teacher Resources:

*enVision Math Common Core: Realize Edition Topic 14 Identifying and Describing Shapes enVision*

*Math Common Core: Realize Edition Topic 15 Position and Location of Shapes*

*enVision Math Common Core: Realize Edition Topic 16 Analyzing, Comparing, and Composing Shapes*

#### Formative Assessments

- teacher observation
- homework
- Lesson *Additional Activity*
- prior knowledge assessment
- guided practice
- Lesson *Quick Check*
- *Daily Core Review*

### Topic/Lesson Plans

Topic	Timeframe
Topic 14 <i>Identifying and Describing Shapes</i>	14 days
Topic 15 <i>Position and Location of Shapes</i>	14 days
Topic 16 <i>Analyzing, Comparing, and Composing Shapes</i>	14 days

### Teacher Notes:

This unit consists of 3 topics from the *enVision Math Realize* series with 5 to 8 lessons per topic. These three topics address the Geometry domain of the Standards for Mathematics for Kindergarten students. In addition, these 3 topics address all eight of the Standards for Mathematical Practice.

Essential questions and enduring understandings were taken directly from the textbook series used by the district, *enVision Math: Common Core Realize Edition*.

**Differentiation (Topic 14, TE pg. 263C)**

**ELL:**

- Repeat oral language practice of the words related to shape names.
- Draw a circle, a triangle, a square, and a rectangle on the board. Ask children to name each shape. Help children pronounce the words as needed. Give children paper and crayon; say the name of one of the shapes and have children draw that shape.

**Special Needs:**

- Review the words *square, rectangle, circle, and triangle and the shapes represented by those words.*
- Hold up a paper cut out representation of each shape and children identify it.
- Draw a square, a rectangle, a circle, and a triangle in one row on the board. Make paper shapes, including several of different sizes and colors of each shape, and put them in a paper bag.
  - Call on a child to pick a shape from the bag and identify it. Then have the child tape the shape to the board under the drawing of the shape. Repeat until all shapes are taped on the board.

**Below Grade Level:**

- Review the shapes: circle, rectangle, square, and triangle. Make a bulletin board of the shapes.
- Help children identify shapes in the classroom.
  - Have children draw the shape they observe and post them in the correct category on the bulletin board. Help children label their drawings. Add to the bulletin board on a daily basis.

**Advanced/Gifted:**

- Challenge students to identify shapes that are the same size but are not in the same relative position.
- Select a shape and have children find pattern blocks with *more/fewer* sides, or the *same* number of sides.

**Resources Provided**

- *enVision Math: Common Core Realize Edition: Topics 12-13 Teacher Guides, digital resources, manipulatives*

## **Kindergarten Wandell School Math Curriculum**

Aligned to the New Jersey Student Learning Standards (NJSL)

**ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS**

### **LESSON** **REFLECTION**

## Kindergarten Wandell School Math Curriculum

Aligned to the New Jersey Student Learning Standards (NJSLS)

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

Reflect on the lesson you have developed and rate the degree to which the lesson *Strongly*, *Moderately* or *Weakly* meets the criteria below.

Lesson Activities:	Strongly	Moderately	Weakly
Are challenging and require higher order thinking and problem solving skills			
Allow for student choice			
Provide scaffolding for acquiring targeted knowledge/skills			
Integrate global perspectives			
Integrate 21 <sup>st</sup> century skills			
Provide opportunities for interdisciplinary connection and transfer of knowledge and skills			
Foster student use of technology as a tool to develop critical thinking, creativity and innovation skills			
Are varied to address different student learning styles and preferences			
Are differentiated based on student needs			
Are student-centered with teacher acting as a facilitator and co-learner during the teaching and learning process			
Provide means for students to demonstrate knowledge and skills and progress in meeting learning goals and objectives			
Provide opportunities for student reflection and self-assessment			
Provide data to inform and adjust instruction to better meet the varying needs of learners
